---

## Models: Satellite M30/M35 Series

### ReWritable CD/DVD Drives

The computer system you purchased may include a ReWritable CD and/or DVD drive(s), among the most advanced data storage technologies available. As with any new technology, you must read and follow all set-up and usage instructions in the applicable user guides and/or manuals enclosed. If you fail to do so, this product may not function properly and you may lose data or suffer other damage. **TOSHIBA AMERICA INFORMATION SYSTEMS (“TOSHIBA”), ITS AFFILIATES AND SUPPLIERS DO NOT WARRANT THAT OPERATION OF THE PRODUCT WILL BE UNINTERRUPTED OR ERROR FREE. YOU AGREE THAT TOSHIBA, ITS AFFILIATES AND SUPPLIERS SHALL HAVE NO RESPONSIBILITY FOR DAMAGE TO OR LOSS OF ANY BUSINESS, PROFITS, PROGRAMS, DATA OR REMOVABLE STORAGE MEDIA ARISING OUT OF OR RESULTING FROM THE USE OF THE PRODUCT, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.**

### Protection of Stored Data

For your important data, please make periodic back-up copies of all the data stored on the hard disk or other storage devices as a precaution against possible failures, alteration, or loss of the data. **IF YOUR DATA IS ALTERED OR LOST DUE TO ANY TROUBLE, FAILURE OR MALFUNCTION OF THE HARD DISK DRIVE OR OTHER STORAGE DEVICES AND THE DATA CANNOT BE RECOVERED, TOSHIBA SHALL NOT BE LIABLE FOR ANY DAMAGE OR LOSS OF DATA, OR ANY OTHER DAMAGE RESULTING THEREFROM. WHEN COPYING OR TRANSFERRING YOUR DATA, PLEASE BE SURE TO CONFIRM WHETHER THE DATA HAS BEEN SUCCESSFULLY COPIED OR TRANSFERRED. TOSHIBA DISCLAIMS ANY LIABILITY FOR THE FAILURE TO COPY OR TRANSFER THE DATA CORRECTLY.**

### Critical Applications

The computer you have purchased is not designed for any “critical applications.” “Critical applications” means life support systems, medical applications, connections to implanted medical devices, commercial transportation, nuclear facilities or systems or any other applications where product failure could lead to injury to persons or loss of life or catastrophic property damage. **ACCORDINGLY, TOSHIBA, ITS AFFILIATES AND SUPPLIERS DISCLAIM ANY AND ALL LIABILITY ARISING OUT OF THE USE OF THE COMPUTER PRODUCTS IN ANY CRITICAL APPLICATIONS. IF YOU USE THE COMPUTER PRODUCTS IN A CRITICAL APPLICATION,**

---

YOU, AND NOT TOSHIBA, ASSUME FULL RESPONSIBILITY FOR SUCH USE.

## **FCC Notice “Declaration of Conformity Information”**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, it may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- ❖ Reorient or relocate the receiving antenna.
- ❖ Increase the separation between the equipment and receiver.
- ❖ Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- ❖ Consult the dealer or an experienced radio/TV technician for help.

---

### **NOTE**

Only Peripherals complying with the FCC Class B limits may be attached to this equipment. Operation with noncompliant peripherals or peripherals not recommended by Toshiba is likely to result in interference to radio and TV reception. Shielded cables must be used between the external devices and the computer's parallel port, monitor port, USB port, PS/2 port®, i.LINK® port and microphone jack. Changes or modifications made to this equipment not expressly approved by Toshiba or parties authorized by Toshiba could void the user's authority to operate the equipment.

---

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- ❖ This device may not cause harmful interference.
- ❖ This device must accept any interference received, including interference that may cause undesired operation.

Contact:

Toshiba America Information Systems, Inc.

9740 Irvine Blvd.

Irvine, CA 92618-1697

(949) 583-3000

## Industry Canada requirement

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

## FCC requirements

The following information is pursuant to FCC CFR 47, Part 68 and refers to internal modems.

This equipment complies with Part 68 of the FCC rules. On the bottom of this equipment is a label that contains, among other information, the FCC registration number and ringer equivalence number (REN) for this equipment. If requested, the information must be provided to the telephone company.

The modem connects to the telephone line by means of a standard jack called the USOC RJ11C.

A plug and jack used to connect this equipment to the premises wiring and telephone network must comply with the applicable FCC part 68 rules and requirements adopted by the ACTA. A compliant telephone cord and modular plug is provided with this product. It is designed to be connected to a compatible modular jack that is also compliant.

The REN is used to determine the number of devices that may be connected to a telephone line. Excessive RENs on a telephone line may result in the devices not ringing in response to an incoming call. In most but not all areas, the sum of RENs should not exceed five (5.0). To be certain of the number of devices that may be connected to a line, as determined by the total RENs, contact the local telephone company. For products approved after July 23, 2001, the REN for this product is part of the product identifier that has the format US:AAAEQ##TXXXX. The digits represented by the ## are the REN without a decimal point (e.g., 03 is a REN of 0.3). For earlier products, the REN is separately shown on the label.

Connection to party line service is subject to state tariffs. Contact the state public utility commission, public service commission or corporation commission for information.

---

## Telephone Company Procedures

The goal of the telephone company is to provide you with the best service it can. In order to do this, it may occasionally be necessary for them to make changes in their equipment, operations or procedures. If these changes might affect your service or the operation of your equipment, the telephone company will give you notice, in writing, to allow you to make any changes necessary to maintain uninterrupted service.

### If Problems Arise

If this equipment causes harm to the telephone network, the telephone company will notify you in advance that temporary discontinuance of service may be required. But if advanced notice is not practical, the telephone company will notify the customer as soon as possible. Also, you will be advised of your right to file a complaint with the FCC if you believe it is necessary.

If trouble is experienced with this equipment, for repair or limited warranty information, please contact Toshiba Corporation, Toshiba America Information Systems, Inc. or an authorized representative of Toshiba, or the Toshiba Support Centre within the United States at (800) 457-7777 or Outside the United States at (949) 859-4273. If the equipment is causing harm to the telephone network, the telephone company may request that you disconnect the equipment until the problem is resolved.

### Disconnection

If you should ever decide to permanently disconnect your modem from its present line, please call the telephone company and let them know of this change.

### Fax Branding

The Telephone Consumer Protection Act of 1991 makes it unlawful for any person to use a computer or other electronic device, including Fax machines, to send any message unless such message clearly contains in a margin at the top or bottom of each transmitted page or on the first page of the transmission, the date and time it is sent and an identification of the business or other entity, or other individual sending the message and the telephone number of the sending machine or such business, other entity, or individual. (The telephone number provided may not be a 900 number or any other number for which charges exceed local or long-distance transmission charges.)

In order to program this information into your fax transmission, refer to the fax software instructions installed on this computer.

---

## Alarm Equipment

If your home has specially wired alarm equipment connected to the telephone line, ensure the installation of this equipment does not disable your alarm equipment. If you have questions about what will disable alarm equipment, consult your telephone company or a qualified installer.

## Instructions for IC CS-03 Certified Equipment

- 1 **NOTICE:** The Industry Canada label identifies certified equipment. This certification means that the equipment meets certain telecommunications network protective, operational and safety requirements as prescribed in the appropriate Terminal Equipment Technical Requirements document(s). The Department does not guarantee the equipment will operate to the user's satisfaction.

Before installing this equipment, users should ensure that it is permissible to be connected to the facilities of the local telecommunications company. The equipment must also be installed using an acceptable method of connection. The customer should be aware that compliance with the above conditions may not prevent degradation of service in some situations.

Repairs to certified equipment should be coordinated by a representative designated by the supplier. Any repairs or alterations made by the user to this equipment, or equipment malfunctions, may give the telecommunications company cause to request the user to disconnect the equipment.

Users should ensure for their own protection that the electrical ground connections of the power utility, telephone lines and internal metallic water pipe system, if present, are connected together. This precaution may be particularly important in rural areas.

Caution: Users should not attempt to make such connections themselves, but should contact the appropriate electric inspection authority, or electrician, as appropriate.

- 2 The user manual of analog equipment must contain the equipment's Ringer Equivalence Number (REN) and an explanation notice similar to the following:

The Ringer Equivalence Number (REN) of this device can be found on the label affixed to your computer.

**NOTICE:** The Ringer Equivalence Number (REN) assigned to each terminal device provides an indication of the maximum number of terminals allowed to be connected to a telephone interface. The termination on an interface may consist of any combination of devices subject only to the requirement that the sum of the Ringer Equivalence Numbers of all the devices does not exceed 5.

- 
- 3 The standard connecting arrangement (telephone jack type) for this equipment is jack type(s): USOC RJ11C.

## Wireless Interoperability

The TOSHIBA Wireless LAN Mini PCI Card products are designed to be interoperable with any wireless LAN product that is based on Direct Sequence Spread Spectrum (DSSS) radio technology, and is compliant to:

- ❖ The IEEE 802.11 Standard on Wireless LANs (Revision A/B), as defined and approved by the Institute of Electrical and Electronics Engineers.
- ❖ The Wireless Fidelity (Wi-Fi) certification as defined by the WECA Wireless Ethernet Compatibility Alliance.

---

### CAUTION

Bluetooth™ and Wireless LAN devices operate within the same radio frequency range and may interfere with one another. If you use Bluetooth™ and Wireless LAN devices simultaneously, you may occasionally experience a less than optimal network performance or even lose your network connection.

If you should experience any such problem, immediately turn off either one of your Bluetooth™ or Wireless LAN.

Please contact Toshiba PC product support on Web site <http://www.toshiba-europe.com/computers/tnt/bluetooth.htm> in Europe or <http://www.pcsupport.global.toshiba.com> in the United States for more information.

---

---

### CAUTION

This device is restricted to indoor use due to its operation in the 5.15 GHz to 5.85 GHz frequency range.

---

## Wireless LAN and your Health

Wireless LAN products, like other radio devices, emit radio frequency electromagnetic energy. The level of energy emitted by Wireless LAN devices however is far much less than the electromagnetic energy emitted by wireless devices like for example mobile phones.

Because Wireless LAN products operate within the guidelines found in radio frequency safety standards and recommendations, TOSHIBA believes Wireless LAN is safe for use by consumers. These standards and recommendations reflect the consensus of the scientific community and result from deliberations of panels and committees of scientists who continually review and interpret the extensive research literature.

---

In some situations or environments, the use of Wireless LAN may be restricted by the proprietor of the building or responsible representatives of the organization. These situations may for example include:

- ❖ Using the Wireless LAN equipment on board of airplanes, or
- ❖ In any other environment where the risk of interference to other devices or services is perceived or identified as harmful.

If you are uncertain of the policy that applies on the use of wireless devices in a specific organization or environment (e.g. airports), you are encouraged to ask for authorization to use the Wireless LAN device prior to turning on the equipment.

## Regulatory Information

The TOSHIBA Wireless LAN Mini PCI Card must be installed and used in strict accordance with the manufacturer's instructions as described in the user documentation that comes with the product. This device complies with the following radio frequency and safety standards.

## Canada – Industry Canada (IC)

This device complies with RSS 210 of Industry Canada.

The installer of this radio equipment must ensure that the antenna is located or pointed such that it does not emit RF field in excess of Health Canada limits for the general population; consult Safety Code 6, obtainable from Health Canada's Web site [www.hc-sc.gc.ca/rpb](http://www.hc-sc.gc.ca/rpb). The RF device shall not be co-located with any other transmitter that has not been tested with this device.

Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of this device.

L'utilisation de ce dispositif est autorisée seulement aux conditions suivantes: (1) il ne doit pas produire de brouillage et (2) l'utilisateur du dispositif doit être prêt à accepter tout brouillage radioélectrique reçu, même si ce brouillage est susceptible de compromettre le fonctionnement du dispositif.

The term "IC" before the equipment certification number only signifies that the Industry Canada technical specifications were met.

To prevent radio interference to the licensed service, this device is intended to be operated indoors and away from windows to provide maximum shielding. Equipment (or its transmit antenna) that is installed outdoors is subject to licensing.

Pour empêcher que cet appareil cause du brouillage au service faisant l'objet d'une licence, il doit être utilisé à l'intérieur et devrait être placé loin

des fenêtrés afin de Fournier un ecrám de blindage maximal. Si le matériel (ou son antenne d'émission) est installé à l'extérieur, il doit faire l'objet d'une licence.

## Europe – EU Declaration of Conformity

- ❖ This device complies with the essential requirements of the R&TTE Directive 1999/5/EC with essential test suites as per standards:

EN 60950 Safety of Information Technology equipment

ETS 300 328 Technical requirements for radio equipment

ETS 300 826 General EMC requirements for radio equipment.

|                      |   |

## USA – Federal Communications Commission (FCC)

This device complies with Part 15 of FCC Rules. Operation of the devices in a Wireless LAN System is subject to the following two conditions:

- ❖ This device may not cause harmful interference.
- ❖ This device must accept any interference that may cause undesired operation.

TOSHIBA is not responsible for any radio or television interference caused by unauthorized modification of the devices included with this TOSHIBA Wireless LAN Mini PCI Card, or the substitution or attachment of connecting cables and equipment other than specified by TOSHIBA.

The correction of interference caused by such unauthorized modification, substitution or attachment will be the responsibility of the user.

---

## Caution: Exposure to Radio Frequency Radiation

The Toshiba Wireless LAN Mini PCI Card will be installed with one of two types of antennas. The both of antenna types, when installed are located at the upper edge of the LCD screen.

For both antennas, the radiated output power of the TOSHIBA Wireless LAN Mini PCI Card is far below the FCC radio frequency exposure limits. Nevertheless, the TOSHIBA Wireless LAN Mini PCI Card shall be used in such a manner that the potential for human contact during normal operation is minimized. In normal operating configuration, the LCD in the upright position, the distance between the antenna and the user should not be less than 20 cm. The antenna(s) used for this transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Antenna(s) used in 5.15 GHz to 5.25 GHz frequency band must be integral antenna which provide no access to the end user.

Refer to the Regulatory Statements as identified in the documentation that comes with those products for additional information.

## Caution: Radio Frequency Interference Requirements

This device is restricted to indoor use due to its operation in the 5.15 GHz to 5.25 GHz frequency range. FCC requires this product to be used indoors for frequency range 5.15 GHz to 5.25 GHz to reduce the potential for harmful interference to co-channel Mobile Satellite systems.

High power radars are allocated as primary users of the 5.25 GHz to 5.35 GHz and 5.65 GHz to 5.85 GHz bands. These radar stations can cause interference with and/or damage this device.

---

### NOTE

The above Caution information applies to products that operate with an 802.11a device.

---

## Taiwan

### Article 14

Unless approved, for any model accredited low power radio frequency electric machinery, any company, trader or user shall not change the frequency, increase the power or change the features and functions of the original design.

- Article 17** Any use of low power radio frequency electric machinery shall not affect the aviation safety and interfere with legal communications. In event that any interference is found, the use of such electric machinery shall be stopped immediately, and reusing of such products can be resumed until no interference occurs after improvement.

The legal communications mentioned in the above item refer to radio communications operated in accordance with telecommunication laws and regulations.

Low power radio frequency electric machinery shall resist against interference from legal communications or from industrial, scientific and medical radio emission electric machinery.

## Using this Equipment in Japan

In Japan, the frequency bandwidth of 2,400 MHz to 2,483.5 MHz for second generation low-power data communication systems such as this equipment overlaps that of mobile object identification systems (premises radio station and specified low-power radio station).

### 1. Sticker

Please put the following sticker on devices incorporating this product.

In the frequency bandwidth of this equipment, industrial device, scientific device, medical device like microwave oven, licensed premises radio station and non-licensed specified low-power radio station for mobile object identification system (RF-ID) that is used in product line of factories, (Other Radio Stations) are used.

1 Please make sure before using this equipment that no Other Radio Stations are used in the neighborhood.

2 In case that RF interference occurs to Other Radio Stations from this equipment, please change promptly the frequency for use, place to use, or stop emitting Radio.

3 Please contact TOSHIBA Direct PC if you have a problem, such as interference from this equipment to Other Radio Stations

### 2. Indication

The indication shown below appears on this equipment.

- 1** 2.4: This equipment uses a frequency of 2.4 GHz.
- 2** DS: This equipment uses DS-SS modulation.
- 3** The interference range of this equipment is less than 40m.
- 4** This equipment uses a frequency bandwidth from 2,400 MHz to 2,483.5 MHz.

---

It is possible to avoid the band of mobile object identification systems.

### 3. TOSHIBA Direct PC

Monday – Friday: 10:00 – 17:00

Toll Free Tel: 0120-13-1100

Direct Dial: 03-3457-5916

Fax: 03-5444-9450

## Device Authorization

This device obtains the Technical Regulation Conformity Certification and the Technical Conditions Compliance Approval, and it belongs to the device class of radio equipment of low-power data communication system radio station stipulated in the Radio Law and the Telecommunications Business Law of Japan.

The Name of the radio equipment: MPC13A-20/R

JAPAN APPROVALS INSTITUTE FOR TELECOMMUNICATIONS  
EQUIPMENT

Approval Number: D01-1128JP

TELECOM ENGINEERING CENTER Approval Number: 03NY.A0018,  
03GZDA0017

The following restrictions apply:

- ❖ Do not disassemble or modify the device.
- ❖ Do not install the embedded wireless module into other device.

## Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy. If not installed and used in accordance with the instructions, it may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try and correct the interference by one or more of the following measures:

- ❖ Reorient or relocate the receiving antenna.
- ❖ Increase the distance between the equipment and the receiver.

- ❖ Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- ❖ Consult the dealer or an experienced radio/TV technician for help.

Toshiba is not responsible for any radio or television interference caused by unauthorized modification of the devices included with this Toshiba Wireless LAN Mini PCI Card, or the substitution or attachment of connecting cables and equipment other than specified by Toshiba.

The correction of interference caused by such unauthorized modification, substitution or attachment will be the responsibility of the user.

**NOTE**

The following information is dependent on what type of wireless device is in your computer.

## Approved Countries/Regions for use for the Atheros AR5001X Mini PCI Wireless network adapter

This equipment is approved to the radio standard by the countries/regions in the following table.

**CAUTION**

Do not use this equipment except in the countries/regions in the following table.

**NOTE**

This device works on passive scan only.

A peer-to-peer mode is not available in 802.11a and Turbo Mode.

### 802.11b (2.4 GHz)

## Bluetooth wireless technology Interoperability

Bluetooth™ Cards from TOSHIBA are designed to be interoperable with any product with Bluetooth wireless technology that is based on Frequency Hopping Spread Spectrum (FHSS) radio technology, and is compliant to:

- ❖ Bluetooth Specification Ver. 1.1, as defined and approved by The Bluetooth Special Interest Group.
- ❖ Logo certification with Bluetooth wireless technology as defined by The Bluetooth Special interest Group.

**CAUTION**

Bluetooth wireless technology is a new innovative technology, and TOSHIBA has not confirmed compatibility of its Bluetooth™ products with all PCs and/or equipment using Bluetooth wireless technology other than TOSHIBA portable computers.

Always use Bluetooth™ cards from TOSHIBA in order to enable wireless networks over two or more (up to a total of seven) TOSHIBA portable computers using these cards. Please contact TOSHIBA PC product support on Web site <http://www.toshiba-europe.com/computers/tnt/bluetooth.htm> in Europe or <http://www.pcsupport.global.toshiba.com> in the United States for more information.

When you use Bluetooth™ cards from TOSHIBA close to 2.4 GHz Wireless LAN devices, Bluetooth transmissions might slow down or cause errors. If you detect certain interference while you use Bluetooth™ cards from TOSHIBA, always change the frequency, move your PC to the area outside of the interference range of 2.4 GHz Wireless LAN devices (40 meters/43.74 yards or more) or stop transmitting from your PC. Please contact TOSHIBA PC product support on Web site <http://www.toshiba-europe.com/computers/tnt/bluetooth.htm> in Europe or <http://www.pcsupport.global.toshiba.com> in the United States for more information.

Bluetooth™ and Wireless LAN devices operate within the same radio frequency range and may interfere with one another. If you use Bluetooth™ and Wireless LAN devices simultaneously, you may occasionally experience a less than optimal network performance or even lose your network connection. If you should experience any such problem, immediately turn off either one of your Bluetooth™ or Wireless LAN. Please contact Toshiba PC product support on Web site <http://www.toshiba-europe.com/computers/tnt/bluetooth.htm> in Europe or <http://www.pcsupport.global.toshiba.com> in the United States for more information.

## Bluetooth wireless technology and your Health

The products with Bluetooth wireless technology, like other radio devices, emit radio frequency electromagnetic energy. The level of energy emitted by devices with Bluetooth wireless technology however is far much less than the electromagnetic energy emitted by wireless devices like for example mobile phones.

Because products with Bluetooth wireless technology operate within the guidelines found in radio frequency safety standards and recommendations, TOSHIBA believes Bluetooth wireless technology is safe for use by consumers. These standards and recommendations reflect the consensus of the scientific community and result from deliberations of panels and committees of scientists who continually review and interpret the extensive research literature.

---

In some situations or environments, the use of Bluetooth wireless technology may be restricted by the proprietor of the building or responsible representatives of the organization. These situations may for example include:

- ❖ Using the equipment with Bluetooth wireless technology on board of airplanes, or
- ❖ In any other environment where the risk of interference to other devices or services is perceived or identified as harmful.

If you are uncertain of the policy that applies on the use of wireless devices in a specific organization or environment (e.g. airports), you are encouraged to ask for authorization to use the device with Bluetooth wireless technology prior to turning on the equipment.

## Regulatory statements

This product complies with any mandatory product specification in any country/region where the product is sold. In addition, the product complies with the following:

### European Union (EU) and EFTA

This equipment complies with the R&TTE directive 1999/5/EC and has been provided with the CE mark accordingly.

### Canada-Industry Canada (IC)

This device complies with RSS 210 of Industry Canada.

Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of this device.”

L'utilisation de ce dispositif est autorisée seulement aux conditions suivantes: (1) il ne doit pas produire de brouillage et (2) l'utilisateur du dispositif doit être prêt à accepter tout brouillage radioélectrique reçu, même si ce brouillage est susceptible de compromettre le fonctionnement du dispositif.

The term “IC” before the equipment certification number only signifies that the Industry Canada technical specifications were met.

## Caution: FCC Interference Statement

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions:

- ❖ This device may not cause harmful interference, and

- 
- ❖ This device must accept any interference received, including interference that may cause undesired operation.

Note that any changes or modifications to this equipment not expressly approved by the manufacturer may void the authorization to operate this equipment.

## Caution: Exposure to Radio Frequency Radiation

The radiated output power of the Bluetooth™ Card from TOSHIBA is far below the FCC radio frequency exposure limits. Nevertheless, the Bluetooth™ Card from TOSHIBA shall be used in such a manner that the potential for human contact during normal operation is minimized.

In order to comply with FCC radio-frequency radiation exposure guidelines for an uncontrolled environment, the Bluetooth™ Card from TOSHIBA has to be operated while maintaining a minimum body to antenna which are located on top of LCD distance of 20 cm.

Refer to the Regulatory Statements as identified in the documentation that comes with those products for additional information.

The Bluetooth™ Card from TOSHIBA is far below the FCC radio frequency exposure limits.

Nevertheless, it is advised to use the Bluetooth™ Card from TOSHIBA in such a manner that human contact during normal operation is minimized.

---

### NOTE

Changes or modifications made to this equipment not expressly approved by TOSHIBA or parties authorized by TOSHIBA could void the user's authority to operate the equipment.

---

## Taiwan

- Article 14 Unless approved, for any model accredited low power radio frequency electric machinery, any company, trader or user shall not change the frequency, increase the power or change the features and functions of the original design.
- Article 17 Any use of low power radio frequency electric machinery shall not affect the aviation safety and interfere with legal communications. In event that any interference is found, the use of such electric machinery shall be stopped immediately, and reusing of such products can be resumed until no interference occurs after improvement.

The legal communications mentioned in the above item refer to radio communications operated in accordance with telecommunication laws and regulations.

Low power radio frequency electric machinery shall resist against interference from legal communications or from industrial, scientific and medical radio emission electric machinery.

## Using this equipment in Japan

In Japan, the frequency bandwidth of 2,400 MHz to 2,483.5 MHz for second generation low-power data communication systems such as this equipment overlaps that of mobile object identification systems (premises radio station and specified low-power radio station).

### 1. Sticker

Please put the following sticker on devices incorporating this product.

In the frequency bandwidth of this equipment, industrial device, scientific device, medical device like microwave oven, licensed premises radio station and non-licensed specified low-power radio station for mobile object identification system (RF-ID) that is used in product line of factories, (Other Radio Stations) are used.

1 Please make sure before using this equipment that no Other Radio Stations are used in the neighborhood.

2 In case that RF interference occurs to Other Radio Stations from this equipment, please change promptly the frequency for use, place to use, or stop emitting Radio.

3 Please contact TOSHIBA Direct PC if you have a problem, such as interference from this equipment to Other Radio Stations

### 2. Indication

The indication shown below appears on this equipment.

- 1** 2.4: This equipment uses a frequency of 2.4 GHz.
- 2** FH: This equipment uses FH-SS modulation.
- 3** The interference range of this equipment is less than 10m.
- 4** This equipment uses a frequency bandwidth from 2,400 MHz to 2,483.5 MHz. It is impossible to avoid the band of mobile object identification systems.

---

### 3. TOSHIBA Direct PC

Monday – Friday: 10:00 – 17:00

Toll Free Tel: 0120-13-1100

Direct Dial: 03-3457-5916

Fax: 03-5444-9450

## Device Authorization

This device obtains the Technical Regulation Conformity Certification, and it belongs to the device class of radio equipment of low-power data communication system radio station stipulated in the Radio Law of Japan.

The Name of the radio equipment: EYXF2CS

TELECOM ENGINEERING CENTER

Approval Number: 01NYDA1305

The following restrictions apply:

- ❖ Do not disassemble or modify the device.
- ❖ Do not install the embedded wireless module into other device.

## DVD-ROM, multi-function drive safety instructions

The DVD-ROM and multi-function drives employ a laser system. To ensure proper use of this product, please read this instruction manual carefully and retain for future reference. Should the unit ever require maintenance, contact an authorized service location.

Use of controls, adjustments or the performance of procedures other than those specified may result in hazardous radiation exposure.

To prevent direct exposure to the laser beam, do not try to open the enclosure.

## Location of the required label

(Sample shown below. Location of the label and manufacturing information may vary.)

### ⚠ CAUTION

This appliance contains a laser system and is classified as a "CLASS 1 LASER PRODUCT." To use this model properly, read the user's guide carefully and keep it for your future reference. In case of any trouble with this model, please contact your nearest "AUTHORIZED service station." To prevent direct exposure to the laser beam, do not try to open the enclosure.

CLASS 1 LASER PRODUCT  
LASER KLASSE 1

Use of controls or adjustments or performance of procedures other than those specified in the owner's manual may result in hazardous radiation exposure.

# Introduction

---

Welcome to the world of powerful, portable multimedia computing. With your Toshiba notebook computer, your work can accompany you wherever you go.

Satellite® M30/M35 Series computers provide considerable computing power, enabling you to perform the most demanding computing tasks from any location.

You will find your operating system, Microsoft® Windows® XP Home or Windows® XP Professional, already installed on your computer. Your operating system offers exciting features and easy Internet access.

---

## NOTE

While Toshiba has made every effort at the time of publication to ensure the accuracy of the information provided herein, product specifications, configurations, prices, system/component/options availability are all subject to change without notice. For the most up-to-date product information about your computer, or to stay current with the various computer software or hardware options, visit Toshiba's Web site at [pcsupport.toshiba.com](http://pcsupport.toshiba.com).

---

---

## This guide

This guide introduces the computer's features. You can:

- ❖ Read the entire guide from beginning to end
- ❖ Skim through and stop when a topic interests you
- ❖ Use the table of contents and the index to find specific information

## Safety icons

This manual contains safety instructions that must be observed in order to avoid potential hazards that could result in personal injuries, damage to your equipment, or loss of data. These safety cautions have been classified according to the seriousness of the risk, and the icons highlight these instructions as follows:

---

### **DANGER**

Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

---

---

### **WARNING**

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

---

---

### **CAUTION**

Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury.

---

---

### **CAUTION**

Indicates a potentially hazardous situation which, if not avoided, may result in property damage.

---

---

---

**NOTE**

Provides important information.

---

## Other icons used

Additional icons highlight other helpful or educational information:

**TECHNICAL NOTE:** This icon indicates technical information about the computer.

---

**HINT:** This icon indicates helpful hints and tips.

---

**DEFINITION:** This icon indicates the definition of a term used in the text.

---

## Other documentation

Your computer comes with the following documentation.

- ❖ This electronic version of the user's guide. Look for the user's guide icon on your desktop or in the DOCS folder on the C: drive.
- ❖ Guides for other programs that may come preinstalled on your computer or that are available for installation on your Recovery media.
- ❖ For accessory information, visit Toshiba's Web site at [toshiba.com](http://toshiba.com).

- ❖ The Microsoft® Windows® operating system documentation which explains the features of the operating system.

## Service options

Toshiba offers a full line of service options built around its SelectServ™ limited warranty programs. For more information, visit Toshiba's Web site at [toshiba.com](http://toshiba.com).

If you have a problem or need to contact Toshiba, see “[If Something Goes Wrong](#)” on page 161.

# Chapter 1

## Getting Started

---

This chapter provides tips for working comfortably, describes how to connect components, and explains what to do the first time you use your computer.

### Selecting a place to work

Your computer is designed to be used in a variety of locations and situations. This section provides guidelines for setting up your computing environment.

### Creating a computer-friendly environment

Place the computer on a flat surface that is large enough for the computer and any other items you need to use, such as a printer. Leave enough space around the computer and other equipment to give adequate ventilation, otherwise, they may overheat.

To keep your computer in prime operating condition, protect your work area from:

- ❖ Dust, moisture and direct sunlight
- ❖ Liquids and corrosive chemicals

**CAUTION**

If you spill liquid into the computer, turn it off, unplug it from the AC power source and let it dry out completely before turning it on again.

If the computer does not operate properly after you turn it back on, contact a Toshiba service representative or your network administrator.

- ❖ Equipment that generates a strong electromagnetic field, such as large stereo speakers (other than speakers that are connected to the computer) or speakerphones.
- ❖ Rapid changes in temperature or humidity and sources of temperature change such as air conditioner vents or heaters.
- ❖ Extreme heat, cold, or humidity. Operate the computer within a temperature range of 41 degrees to 95 degrees Fahrenheit (5 degrees to 35 degrees Celsius) and 20 percent to 80 percent non-condensing humidity.

## Keeping yourself comfortable

Strain and stress injuries are becoming more common as people spend more time using their computers. However, with a little care and the proper use of the equipment, you can work comfortably throughout the day.

**WARNING**

Using the computer keyboard incorrectly can result in discomfort and possible injury. If your hands, wrists, and/or arms hurt while typing, stop using the computer and rest. If the discomfort persists, consult a physician.

This section provides hints on avoiding strain and stress injuries. For more information, consult books on ergonomics, repetitive-strain injury, and repetitive-stress syndrome.

## Placement of the computer

Proper placement of the computer and external devices is important to avoid stress-related injuries. Consider the following when placing your computer.

- ❖ Place the computer on a flat surface at a comfortable height and distance. You should be able to type without twisting your torso or neck and look at the screen without slouching.
- ❖ If you use an external monitor, the top of the screen should be no higher than eye level.
- ❖ If you use a paper holder, set it at the same height and distance as the screen.

## Seating and posture

When using your computer, maintain good posture with your body relaxed and your weight distributed evenly. Proper seating is a primary factor in reducing work strain. Some people find a backless chair more comfortable than a conventional chair. Whichever type you choose, use the following guidelines to adjust your chair for maximum computing comfort.

*Correct posture and positioning of the computer*

- ❖ Position your chair so that the keyboard is at or slightly lower than the level of your elbow. You should be able to type comfortably with your shoulders relaxed and your forearms parallel to the floor.

If you are using a conventional chair:

- ❖ Your knees should be slightly higher than your hips. If necessary, use a footrest to raise the level of your knees and ease the pressure on the back of your thighs.
- ❖ Adjust the back of your chair so that it supports the lower curve of your spine. If necessary, use a cushion to provide extra back support. Lower-back-support cushions are available at many office supply stores.
- ❖ Sit with your back straight so that your knees, hips, and elbows form approximately 90-degree angles when you work. Do not slump forward or lean back too far.

## **Lighting**

Proper lighting can improve the readability of the display and reduce eyestrain.

- ❖ Position the display panel or external monitor so that sunlight or bright indoor lighting does not reflect off the screen. Use tinted windows or shades to reduce glare.
- ❖ Avoid placing your computer in front of a bright light that shines directly into your eyes.
- ❖ If possible, use soft, indirect lighting in your computer work area.

## **Arms and wrists**

- ❖ Avoid bending, arching, or twisting your wrists. Keep them in a relaxed, neutral position while typing.
- ❖ Exercise your hands, wrists and arms to improve circulation.

---

## Work habits

The key to avoiding discomfort or injury from strain is to vary your activities. If possible, schedule a variety of tasks into your working day. Finding ways to break up the routine can reduce stress and improve your efficiency.

- ❖ Take frequent, short breaks to change position, stretch your muscles, and relieve your eyes. A break of two or three minutes every half hour is more effective than a long break after several hours.
- ❖ Avoid performing repetitive activities for long periods. Intersperse such activities with other tasks.
- ❖ Focusing your eyes on your computer screen for long periods can cause eyestrain. Look away from the computer frequently and focus your eyes on a distant object for at least 30 seconds.

## Other precautions

Your computer is designed to optimize safety, minimize strain, and withstand the rigors of portability. However, you should observe certain precautions to further reduce the risk of personal injury or damage to the computer.

---

**CAUTION**

Do not apply heavy pressure to the computer or subject it to sharp impacts. Excessive pressure or impact can damage computer components or cause your computer to malfunction.

---

**CAUTION**

Some PC Cards can become hot with prolonged use. If two cards are installed, both can become hot even if only one is used extensively. Overheating of a PC Card can result in errors or instability in the PC Card operation.

Be careful when you remove a PC Card that has been used for lengthy periods of time.

## Setting up your computer

**TECHNICAL NOTE:** You must complete all set up steps up to [“Setting up your software” on page 56](#) before adding external or internal components to your computer. These components include, but are not limited to, a mouse, keyboard, printer, memory, and PC cards.

Your computer comes with a rechargeable battery pack that must be charged before you can use it.

To use external power or to charge the battery, you must attach the AC adapter. See [“Connecting to a power source” on page 43](#).

To register your computer online, or to sign up for an Internet account, you must be connected to the Internet using a modem or LAN connection.

Before adding any of these devices to the computer, be sure to complete [“Setting up your software” on page 56](#).

After setting up your computer, you may want to:

- ❖ Add more memory
- ❖ Connect a mouse
- ❖ Connect a full-size keyboard
- ❖ Connect an external monitor

- ❖ Connect a local printer
- ❖ Install PC Cards

## Connecting to a power source

Your computer requires power to operate. Use the power cable and AC adapter to connect the computer to a live electrical outlet, or to charge the computer's battery.

*Sample power cable and AC adapter*

### **⚠ WARNING**

Handling the cord on this product will expose you to lead, a chemical known to the State of California to cause birth defects or other reproductive harm. ***Wash hands after handling.***

### **⚠ CAUTION**

Hold the power cable by its plug when you connect/disconnect it. Do NOT pull the cable itself. Doing so may damage the power cable and result in a short circuit or electric shock.

**⚠ CAUTION**

Use only the AC adapter supplied with your computer or an equivalent adapter that is compatible. Use of any incompatible adapter could damage your computer. Toshiba assumes no liability for any damage caused by use of an incompatible adapter.

When you connect the AC adapter to the computer, always follow the steps in the exact order as described in the User's Manual. Connecting the power cable to a live electrical outlet should be the last step; otherwise the adapter DC output plug could hold an electrical charge and cause an electrical shock or minor bodily injury when touched. As a general safety precaution, avoid touching any metal parts.

---

To connect AC power to the computer:

- 1 Connect the power cable to the AC adapter.

*Connecting the power cable to the AC adapter*

- 2 Plug the AC adapter into the DC-IN on the back of the computer.

*Connecting the AC adapter to the computer*

- 3 Connect the power cable to a live electrical outlet.

If the electrical outlet is live, the system indicator panel's AC power light (●) glows blue.

If the main battery is present, the battery light (■) glows:

- ❖ Amber while the battery is charging
- ❖ Blue when the battery is fully charged

If the battery light flashes amber during charging, either the battery pack is malfunctioning, or it is not receiving input from the AC power supply. Disconnect the AC cable and remove the battery pack. See [“If Something Goes Wrong” on page 161](#) for troubleshooting information.

**⚠ WARNING**

Damaged power cables can cause fire or electric shock. Never modify, forcibly bend, place heavy objects on top of, or apply heat to the power cable.

If the power cable becomes damaged or the plug overheats, discontinue use. There is a risk of electric shock.

Never remove the power plug from the outlet with wet hands. Doing so may cause an electric shock.

---

## Charging the battery

Your computer came with its battery already installed. Before using the battery to power the computer, you must charge it.

To charge the battery, leave the computer plugged in to an AC power source for at least three hours with the computer turned off. After that, the battery will be completely charged and ready to power the computer.

---

### CAUTION

Once the battery is charged for the first time, avoid leaving the computer plugged in and turned off for more than a few hours at a time. Continuing to charge a fully charged battery can damage the battery.

---

## Adding memory

HINT: To purchase additional memory modules, see the accessories information packaged with your system or visit [toshiba.com](http://toshiba.com).

---

Your Satellite® M30/M35 Series computer comes with enough memory to run most of today's popular applications. You may want to increase the computer's memory if you use complex software or process large amounts of data.

For more information on memory options, check the accessories information that came with your computer, or visit [toshiba.com](http://toshiba.com).

---

## Installing a memory module

Additional memory modules can be installed in the memory expansion slots on the base of the computer. You will need a standard Phillips no.1 screwdriver for this procedure.

---

**CAUTION**

To avoid damaging the computer's screws, use a standard Phillips no. 1 screwdriver that is in good condition.

---

---

**CAUTION**

Installing a memory module with the computer's power on may damage the computer, the module, or both.

---

The computer has two memory expansion slots — Slot A and Slot B. You can install one or two memory modules.

If the computer is on, begin at step 1; otherwise, skip to step 3.

- 1 If the computer is on, click **Start, Turn off computer**.

The Turn off computer window appears.

- 2 Click **Turn Off**.

The operating system turns off the computer.

- 3 Unplug and remove any cables connected to the computer.

- 4 Remove the battery.

- 5 Close the display panel and turn the computer upside down to locate the expansion memory slot cover to the memory slot.

### *Locating the memory slot cover*

- 6 Using a standard Phillips no. 1 screwdriver, unscrew the screw that secures the memory slot cover, then remove the memory slot cover.

### *Removing the memory module cover*

- 7 Place the screw and the cover in a safe place so that you can retrieve them later.

**CAUTION**

Static electricity can damage the memory module. Before you handle the module, touch a grounded metal surface to discharge any static electricity you may have built up.

To avoid damaging the memory module, be careful not to touch its pin connector on the side you insert into the computer.

- 8 Remove the new memory module from its antistatic packaging.
- 9 Holding the memory module by its edges so that the gold connector bar faces the slot, fit the module into the socket.
- 10 Gently press down on the memory module connector until the clips snap into place.

Do not force the module into position. The memory module should be level when secured in place.

*Inserting the memory module into the slot*

The clips on either side of the module will click to secure the module.

**CAUTION**

Avoid touching the connectors on the memory module or on the computer. Grease or dust on the connectors may cause memory access problems.

**11** Replace the cover plate and the screw.

**12** Turn the computer over and restart it.

You can now continue setting up the computer. When the operating system has loaded, you can verify that the computer has recognized the additional memory.

If you are adding extra memory after setting up the computer, verify that the computer has recognized it correctly as described in [“Checking total memory” on page 51](#).

## Removing a memory module

If you need to remove a memory module:

- 1** Complete steps 1–6 in [“Installing a memory module”](#) to shut down the computer and open the memory module cover.

**CAUTION**

Do not try to remove a memory module with the computer turned on. You can damage the computer and the device.

Do not remove the memory module while the computer is in Standby mode. The computer could hang up the next time you turn it on and data in memory will be lost. In either of the above cases, the Standby configuration will not be saved.

The following message appears when you turn on the power:

Warning: Resume Failure  
Press Any Key To Continue

If the computer hangs up when you turn it on, perform the following: Press the power button and hold it down for five seconds, then turn the power on again.

- 2 Pull the clips away from the memory module.  
The memory module pops partially out of the slot.
- 3 Carefully remove the module from the slot.

### *Removing the memory module*

- 4 Replace the cover plate and screws.
- 5 Turn the computer over and restart it.

## **Checking total memory**

When you add or remove memory, you can check that the computer has recognized the change. To do this:

- 1 Click **Start**, then click **Control Panel**.
- 2 Click **Performance and Maintenance**.
- 3 Click **System**.
- 4 The **General** tab view automatically appears and shows total memory.

If the computer does not recognize the memory configuration, turn off the computer, remove the memory slot cover, and make sure the memory module is seated properly, as described in step 10 of [“Adding memory” on page 46](#).

---

## Turning on the computer

The computer is now ready for you to turn it on and begin using it.

### Opening the display panel

- 1 Slide the display latch to the right.
- 2 Lift the display panel.

---

**CAUTION**

To avoid damaging the display panel, do not force it beyond the point where it moves easily, and never lift the computer by the display panel.

Small bright dots may appear on your TFT display when you turn on your computer. Your display contains an extremely large number of thin-film transistors (TFT) and is manufactured using high-precision technology. Any small bright dots that may appear on your display are an intrinsic characteristic of the TFT manufacturing technology.

---

### Turning on the power

To turn on the computer:

- 1 Make sure any external devices (such as the AC adapter, if you plan to use AC power rather than battery power) are properly connected and ready.
- 2 Check to ensure that all drives are empty.
- 3 Press and hold the power button in until the on/off light on the system indicator panel glows blue—about one second.

*Turning on the power*

- 4 The preinstalled operating system will load automatically.

**CAUTION**

When you turn on the computer for the first time, do not turn off the power again until the operating system has loaded completely.

## Using the TouchPad™

The TouchPad, the small, smooth square cutout located in front of the keyboard, is sensitive to touch and enables you to move the cursor with the stroke of a finger. Simply move your finger on the TouchPad in the direction you'd like to move the cursor:

- ❖ To move the cursor to the top of the page, push your finger forward on the TouchPad.
- ❖ To move the cursor to the bottom of the page, drag your finger toward yourself.
- ❖ To move the cursor to the right side of the page, slide your finger across the TouchPad from left to right.

- 
- ❖ To move it to the left side, slide your finger from right to left.
- 

**NOTE**

Because the TouchPad is much smaller than the display screen, moving your cursor across the screen often means having to move your finger several times across the TouchPad in the preferred direction.

---

Once you've positioned your cursor, you can either click it into place by double-tapping the TouchPad or clicking the control buttons.

## Scrolling with the TouchPad™

There are two active regions on the TouchPad that allow you to scroll as you would with any wheel device on a mouse or trackball.

To scroll vertically, run your finger up or down along the right edge of the TouchPad. To scroll horizontally, run your finger along the bottom edge of the TouchPad.

## Control buttons

When a step instructs you to click or choose an item, move the cursor to the item, then press and release the primary (left-hand) button. To double-click, press the primary button twice in rapid succession. The primary button usually corresponds to the left mouse button.

The function of the secondary (right-hand) button depends on the program you are using. It usually corresponds to the right mouse button. Check your program's documentation to find whether it uses the right mouse button.

## Disabling or enabling the TouchPad

The TouchPad is enabled by default. To change the enable/disable TouchPad setting:

- 1 Click **Start, Control Panel**.

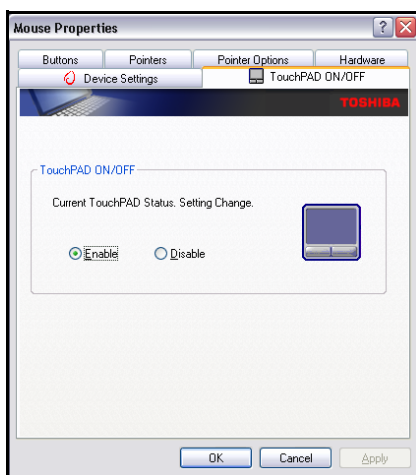

The Control Panel window appears.

- 2 Click **Printers and Other Hardware**.

- 3 Click the **Mouse** icon.

- 4 Click the **TouchPAD ON/OFF** tab.

The TouchPAD ON/OFF tab view window appears.

- 5 Select **Disable** or **Enable**, whichever is appropriate.

- 6 Click **Apply**.

- 7 Click **OK**.

The Mouse Properties window closes.

- 8 Close the Printers and Other Hardware window.

- 9 Close the Control Panel window.

You can also use a hot key to disable or enable the TouchPad. See [“Disabling or enabling the TouchPad” on page 196](#).

## Setting up your software

The first time you turn on your computer, the Setup Wizard guides you through steps to set up your software.

- 1 From the welcome screen, click **Next** to enter the Setup Wizard.
- 2 Confirm acceptance of Microsoft’s End User License Agreement and click **Next**.
- 3 Enter the computer name and description, and click **Next** or **Skip**.

The computer will pause for a moment while checking for an internet connection.

A window will display the message: “An Internet connection could not be chosen.”

- 4 Click **Skip** to exit the process or **Next** to continue.

---

**NOTE**

To register online, your computer’s modem must be connected to a voice-grade telephone line.

---

A window will display asking if you wish to register with Toshiba and Microsoft.

- 5 Click **Yes** to register, or **No** to exit the process.

---

**NOTE**

If you click No, you may register with Toshiba by clicking the Register with Toshiba icon on the desktop.

---

- 6 Enter your personal information in the registration window.

- 
- 7 Enter your name and click **Finish** to complete the process.

Your computer restarts automatically.

## Registering your computer with Toshiba

To register your computer with Toshiba at a time later than when you first start your computer, you may also click on the desktop icon to do so electronically.

### Setting up other devices

You may want to take this time to set up your printer. For more information, see [“Setting up your printer” on page 115](#).

## Turning off the computer

It is a good idea to turn off your computer when you are not using it for a while.

If you are using the computer for the first time, leave the computer plugged into a power source (even though the computer is off) to fully charge the main battery. With the computer off, it may take up to three hours to recharge the main battery.

When you power down the computer, you have three options to choose from: Turn Off (or Shut down), Hibernate, and Standby. Each option has its advantages.

- ❖ Use the Turn Off command if you are using the Windows XP Home version operating system, or the Windows XP Professional operating system when not connected to a domain server.
- ❖ Use the Shut down command if you are using the Windows XP Professional operating system and are connected to a domain server.
- ❖ If you have work in progress and are not connected to a network, use the Windows Standby or Hibernate

commands to save your system settings to memory so that, when you turn on the computer again, you will automatically return to where you left off.

- ❖ To leave the computer off for a longer period, you can use the Windows Turn Off command when not connected to a domain server or the Shut down when connected to a domain server instead.

---

**CAUTION**

Never turn off the computer while any drive is in use. Doing so may damage the media in use and result in loss of data. For more information, see [“Powering down the computer” on page 91](#).

---

## Closing the display panel

When you are finished, shut the computer down and close the display panel to keep dust and dirt out of the computer.

If you close the computer while it is still on, these actions will occur:

- ❖ If you have the LCD power-saver feature set, the LCD panel will automatically turn off until you open it again.
- ❖ If you have the audible warning set, the computer will beep to notify you that it is still on.
- ❖ If you have an action feature set, the computer will perform either: Nothing, Standby, Hibernate, or Turn Off (see [“Enabling Hibernation” on page 156](#)).

## Using external display devices

Your computer comes with a built-in LCD display, but you can also connect three different types of external display devices to one of two available video ports:

- ❖ A television via the video-out port.

**TECHNICAL NOTE:** In the Windows® XP operating system, you do not need an Internet connection to watch cable or broadcast TV, but you must purchase a compatible TV tuner card.

- ❖ A video display device, such as a video projection unit, via the video-out port.
- ❖ An external monitor or projector via the RGB (monitor) port.
- ❖ A video display device via the S-Video port.

Before connecting a television, video projector, monitor or other display device, configure your computer for the type of device you're connecting. To do this, refer to the documentation for your operating system and devices.

## Connecting the display device

If you're connecting a television or other video display device to the computer's video-out port, first refer to [“Selecting video cables” on page 59](#) below for guidelines on choosing a video cable, then refer to [“Connecting to the video-out port”](#) below.

If you're connecting an SVGA monitor, skip to [“Connecting an external monitor or projector” on page 61](#).

## Selecting video cables

To connect a device to the S-video port, you'll need to purchase a cable. For the best video quality, always use a properly shielded cable.

**HINT:** Toshiba recommends using a cable no longer than 20 feet (approximately 6 meters).

---

Using a poor quality cable may result in a dull or fuzzy picture, poor color, ghosting, video noise, or loss of video.

## Connecting to the video-out port

---

### NOTE

Video cables are not included with your computer. To connect a device to the video-out port, you will need to purchase an S-video cable.

---

To connect the device:

- 1 Connect one end of the video cable to the external video device.

Refer to the documentation provided with the device for the location of its video-in port.

- 2 Connect the other end of the video cable to the video-out port on the left side of the computer.
- 3 Turn on the external video device.
- 4 Set the display mode by pressing Fn + F5, or by setting the Display Properties settings. For more information, see [“Directing the display output when you turn on the computer”](#) on page 61.

---

**TECHNICAL NOTE:** If you are connecting to a television, you may need to change the display properties. Most televisions use or support an 800 x 600 standard resolution.

---

---

## Connecting an external monitor or projector

You can easily attach an external monitor or projector to your computer if you need a larger screen. To do this:

- 1 Connect the monitor's video cable to the RGB (monitor) port on the back of the computer.
- 2 Connect the device's power cable to a live electrical outlet.
- 3 Turn on the external device.
- 4 Set the display mode by pressing Fn + F5, or by setting the Display Properties settings.

## Directing the display output when you turn on the computer

Once you've connected an external display device, you can choose to use the internal display only, the external device only, or both simultaneously. The quickest way to change the display output settings is to use the display hot key (Fn + F5):

- 1 Press Fn and F5 simultaneously.
- 2 While holding down Fn, press F5 repeatedly until the setting you want takes effect.

This hot key cycles through the settings in the following order:

- ❖ Built-in display only
- ❖ Built-in display and external monitor simultaneously
- ❖ External monitor only
- ❖ Built-in display and TV (or other external video device) simultaneously
- ❖ TV (or other external video device) only

- 3 Release the Fn key.

**TECHNICAL NOTE:** You can also change these settings using the Display Properties Box.

Set the option for the video controller by clicking Start, then Control Panel and clicking Display. Choose the Settings tab, click the Advanced button, select Display Device, select the applicable Monitor type, click Apply or OK.

---

For more information on switching the display output, see [“Directing the display output when you turn on the computer” on page 61.](#)

## **Adjusting the quality of the external display**

To obtain the best picture quality from your television (or other video display device), you may need to adjust the video settings. See the video device documentation for additional configuration steps.

---

**TECHNICAL NOTE:** In order to use one of the simultaneous modes, you must set the resolution of the internal display panel to match the resolution of the external display device. The external display device must support a resolution of 640 X 480 or higher.

---

---

## Using an external keyboard

If you prefer to use a full-size keyboard, you can attach one to your computer. The computer's USB port supports any USB-compatible keyboard.

## Using a mouse

You may want to use a mouse instead of the computer's built-in TouchPad. You can use a USB-compatible mouse.

---

### NOTE

After logging on to your system, the mouse cursor may move to the upper-right side of the screen. If this occurs, push the Esc or Windows key to return it to its original position.

---

## Connecting a local printer

---

### CAUTION

Your printer documentation may require you to install the printer software before physically connecting the printer to your computer. If you do not install the software as instructed by the printer manufacturer, the printer may not function correctly.

---

---

### CAUTION

Never connect the printer cable while the computer's power is on. Doing so may damage the printer, the computer, or both.

---

---

### NOTE

Read the documentation that came with your printer. Follow the manufacturer's instructions when connecting a local printer.

---

**NOTE**

You must supply the proper printer cable. If one did not come with your printer, you may purchase one from an electronics or computer store.

If your printer is ECP- or IEEE-compliant, make sure your printer cable is an IEEE 1284 cable.

These instructions assume you have a parallel printer. If you have a USB printer, consult the document that came with your printer.

To connect the printer:

- 1 If the computer is on, turn it off.
- 2 Connect the printer cable to the printer and to the computer's parallel port. Use the printer cable illustration as a connection guide.

*Identifying the ends of a parallel printer cable*

- 3 Plug the printer's power cable into a live electrical outlet.
- 4 See your printer documentation for additional configuration steps.

**NOTE**

Some printers use USB to connect.

For more information on setting up your printer, see [“Using a printer” on page 113](#).

For more information on getting your printer to print, see [“Printing your work” on page 78](#).

## Connecting an optional external diskette drive

Some operations, such as creating a password service diskette, require a diskette drive designed for use with 3.5-inch diskettes.

*An optional external USB diskette drive*

To connect an optional external USB diskette drive, connect the cable to one of the USB ports.

*Connecting an optional external USB diskette drive*

---

## Connecting external speakers or headphones

To attach an external stereo output device:

- 1 Locate the headphone jack near the front of the right side of the computer.
- 2 Using any necessary adapters, plug the cable from the external audio device into the headphone jack. The headphone jack requires a 3.5-mm, 16-ohm stereo jack.

When the headphone is inserted, the internal speakers are automatically disabled.

## Connecting a microphone

To record high-quality sounds, you can attach a microphone:

- 1 Locate the microphone jack near the front of the right side of the computer.
- 2 Plug the microphone cord into the jack.
- 3 Turn on the microphone.

For more information, see [“Recording sounds” on page 132](#).

# Chapter 2

## Learning the Basics

---

This chapter gives some computing tips and provides important information about basic features.

### Computing tips

- ❖ Save your work frequently.

Your work stays in the computer's temporary memory until you save it to the disk. If the network you are using goes down and you must restart your computer to reconnect, or your battery runs out of charge while you are working, you will lose all work since you last saved.

See [“Saving your work” on page 76](#) for further information.

HINT: Some programs have an automatic save feature that can be activated. This feature saves your file to the hard disk at preset intervals. See your software documentation for details.

---

- ❖ Back up your files to disks (or other removable media) on a regular basis. Label the backup copies clearly and store them in a safe place.

It's easy to put off backing up because it takes time. However, if your hard disk suddenly fails, you will lose all the data on it unless you have a separate backup copy.

- ❖ Use Error-checking and Disk Defragmenter regularly to conserve disk space and improve performance.
- ❖ Scan all new files for viruses.
- ❖ This precaution is especially important for files you receive via diskette, email, or download from the Internet. Take frequent breaks to avoid repetitive-motion injuries and eyestrain.
- ❖ Do not turn off the computer if a drive indicator light indicates a drive is active.

Turning off the computer while it is reading from or writing to a disk may damage the disk, the drive, or both.

- ❖ Before turning off the computer, use the Turn off computer command or Standby command. See [“Powering down the computer” on page 91](#) to learn more about Standby.

---

**NOTE**

The Windows® XP operating system records information, such as your desktop setup, during its shutdown procedure. If you do not let the Windows® XP operating system shut down normally, details such as new icon positions may be lost.

---

## Using the keyboard

Your computer's keyboard contains character keys, control keys, function keys, and special Windows® keys, providing all the functionality of a full-size keyboard.

*Keyboard*

## Character keys

Typing with the character keys is very much like typing on a typewriter, except that:

- ❖ The space bar creates a space character instead of just passing over an area of the page.
- ❖ The lowercase letter l (el) and the number 1 are not interchangeable.
- ❖ The uppercase letter O and the number 0 are not interchangeable.

## Making your keyboard emulate a full-size keyboard

Although your computer's keyboard layout is compatible with a standard full-size keyboard, it has fewer keys.

A standard full-size keyboard has two Enter, Ctrl, and Alt keys; editing keys; cursor positioning keys; and a numeric keypad. Pressing the Fn key simultaneously in combination with one of the specially marked keys allows you to emulate a full-size keyboard.

Your computer's keyboard has only one Enter and one Ctrl key. Most of the time, this does not matter. However, some

programs assign separate functions to the right and left Ctrl and Alt keys, or to the regular and numeric pad Enter keys on the full-sized keyboard. Using the Fn key you can simulate these separate keys, as follows:

- ❖ Press Fn and Ctrl simultaneously to simulate the Ctrl key on the right side of the enhanced keyboard.
- ❖ Press Fn and Enter simultaneously to simulate the Enter key on the numeric pad of the enhanced keyboard.

## Ctrl, Fn, and Alt keys

*Ctrl, Fn, and Alt keys*

The Ctrl, Fn, and Alt keys do different things depending on the program you are using. For more information, see your program documentation.

## Function keys

The function keys (not to be confused with the Fn key) are the 12 keys at the top of the keyboard.

*The function keys*

F1 through F12 are called function keys because they execute programmed functions when pressed. Used in combination with the Fn key, function keys marked with icons execute specific functions on the computer. Fn+F9 turns off the TouchPad. For more information, see [“Fn-esse®” on page 146](#), or [“Hot Keys” on page 191](#).

## Windows special keys

### *The Windows special keys*

Your computer's keyboard has two keys that have special functions in Windows:

- ❖ **Start key**—Opens the Start menu
- ❖ **Application key**—Has the same function as the secondary mouse (or AccuPoint II) button

## Overlay keys

The keys with gray numbers and symbols on the front of them form the numeric and cursor overlay. This overlay lets you enter numeric data or control the cursor as you would using the 10-key keypad on a desktop computer's keyboard.

### *Numeric and cursor control overlay*

---

## Using the overlay to type numeric data

The keys with the numbers on their right front are the numeric overlay keys.

To turn the numeric overlay on, press Fn and F11 simultaneously. The numeric mode light on the keyboard indicator panel glows when the numeric overlay is on.

You can still use the overlay keys to type alphabetic characters while the numeric overlay is on. To do so:

- ❖ For lowercase letters, hold down Fn while you type the letters.
- ❖ For uppercase letters, hold down both Fn and Shift while you type the letters.

To use the cursor control keys when the numeric overlay is on:

- ❖ Press and hold down Shift while you use the cursor control overlay keys.
- ❖ To return to the numeric overlay, release Shift.

To disable the numeric overlay, hold down the Fn key and press F11 again. The numeric mode light on the keyboard indicator panel goes out.

## Using the overlay for cursor control

The keys with the gray arrows and symbols on their left front are the cursor control overlay keys.

To turn the cursor control overlay on, press Fn and F10 simultaneously. The cursor control mode light on the keyboard indicator panel glows when the cursor control overlay is on.

To type alphabetic characters while the overlay is on:

- ❖ For lowercase letters, hold down Fn while you type the letters.

- ❖ For uppercase letters, hold down both Fn and Shift while you type the letters.

To use the numeric overlay keys while the cursor control overlay is on:

- ❖ Hold down Shift while you use the numeric overlay keys.
- ❖ To return to the cursor control overlay, release Shift.

To disable the cursor control overlay, hold down the Fn key and press F10 again. The cursor control mode light on the keyboard indicator panel goes out.

## Starting a program

The easiest way to start a program is to double-click the name of the file that contains the information you want to work on. To find the file, use My Computer or Windows® Explorer.

If you prefer to open the program first, you have four options. You can:

- ❖ Double-click the icon for the program on your desktop
- ❖ Use the Start menu
- ❖ Use Windows® Explorer or My Computer to locate the program file
- ❖ Use the Run dialog box

The next three sections explain how to start a program from the Start menu, Explorer and the Run dialog box.

### Starting a program from the Start menu

When you install a program, the operating system usually puts an icon in the All Programs menu. To start a program that has an icon in the All Programs menu, follow these steps, which use the Windows® WordPad program as an example:

- 1 Click **Start**, then point to **All Programs**.

The Windows® XP operating system displays the All Programs menu, which lists programs and program groups. If your program is listed, go to Step 3, otherwise, continue with Step 2.

- 2 Point to the program group, in this example, **Accessories**.  
The Accessories menu is displayed.
- 3 Click the program, in this example, **WordPad**.  
WordPad opens.

To close the program, click the **Close** button in the upper-right corner of the program's window.

## Starting a program from Windows® Explorer

If a program is not listed in the Programs menu, you can start it from Windows® Explorer. Windows® Explorer gives you a view of your computer's contents as a hierarchy or "tree." You can easily see the content of each drive and folder on your computer. To use this method, you should know the file name and location of the program's executable file (this file ends with .exe).

This example opens WordPad using its file name, *wordpad.exe*.

- 1 Click **Start**, then point to **All Programs**.
- 2 Click **Accessories**.
- 3 Click **Windows Explorer**.
- 4 Click **My Computer**, to expand it.
- 5 In the left part of the window, under the C: icon, double-click the folder containing the program, in this case **Program Files**.

Windows® Explorer shows the contents of the Program Files folder on the right side of the window. The left side of the

window shows all the folders contained within the Program Files folder.

**6** In the left part of the window, click **Windows NT**.

**7** Click **Accessories**.

Windows® Explorer shows the contents of the **Accessories** folder on the right side of the window.

**8** In the right part of the window, double-click **WordPad**.

The operating system opens WordPad.

 To close the program, click the **Close** button in the upper-right corner of the program's window.

## Starting a program from the Run dialog box

This example uses the Run command to start WordPad:

**1** Click **Start**, then click **Run**.

The Run dialog box appears.

*Sample Run dialog box*

**2** In the Run dialog box:

- ❖ If you know the program's location, type the command line. For a program in the Windows® folder, type just the program name. Otherwise, type the full file path. For example, to access WordPad, type:  
c:\Program Files\WindowsNTAccessories\Wordpad, then click **OK**.

- ❖ If you do not know the location, click **Browse...**  
In the Browse dialog box, enter the file name (for example, *wordpad.exe*) and select the drive to search. When the operating system has found the file, click **Open**.

HINT: To run the same program again, click the arrow to the right of the text box and select the command line from the drop-down list.

---

## Saving your work

Before you turn off the computer, save your work on the hard disk drive or a diskette. This is one of the most important rules of computing.

TECHNICAL NOTE: Save your data even when you are using the Standby command, in case the main battery discharges before you return to work.

---

Saving documents is quick and easy, so it is a good idea to get in the habit of saving frequently.

Many programs offer a feature that saves documents at regular intervals. Check your program's documentation to see if it has an automatic save feature.

## Saving files

- 1 On the **File** menu of your Windows® program, click **Save**.

If you are working with a document that already has a file name, this is all you need to do. If you created a new document, your program displays a Save As dialog box.

---

Use this dialog box to specify where to store the document and to give it a file name.

*A sample Save As dialog box*

- 2 Choose the drive and folder where you want your file to be stored.
- 3 Type a file name, then click **Save**.

HINT: To make another copy of the file you are currently working with, choose Save As from the File menu and give the new file a different name.

---

The Windows® XP operating system supports file names of up to 255 characters; the names can include spaces. Some applications still require MS-DOS® file names.

## File names

If you plan to share your files with a computer using a pre-Windows® 95 version of the Windows® operating system, the file name must be no more than eight characters long. Typically the file name also has an extension, consisting of a period and up to three additional characters.

---

You may use all the letters and numbers on the keyboard plus these characters: \_ ^ \$ ~ ! # % & { } ( ) @ and ' . MS-DOS® file names are not case-sensitive and must not contain spaces.

## Using a file extension

Most programs assign an extension to the file name that identifies the file as being created in the program with a particular format. For example, Microsoft® Word saves files with a .doc extension. Any file name with an extension of “.doc” is assumed to be a Microsoft® Word file. Creating your own extension is usually unwise, since the program is unlikely to recognize a strange extension and may refuse to handle your file correctly.

## Printing your work

Ensure the operating system is set up for your printer as described in [“Using a printer” on page 113](#).

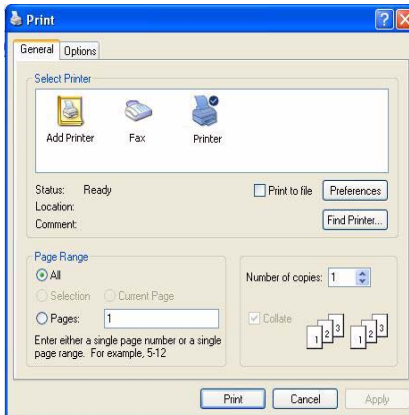

**HINT:** You only need to set up the printer the first time you connect it. If you use more than one printer or are changing printers, you will need to set up the Windows® XP Professional operating system to run with the additional printer(s).

---

To print a file:

- 1 If your printer is not on, turn it on now.
- 2 Open the **File** menu of your Windows® program and click **Print**.

The program displays a Print dialog box.

*A sample Print dialog box*

- 3 Specify the print parameters. For example, the range of pages and number of copies to print.
- 4 Click **Print**.

## Using the DVD-ROM or multi-function drive

Optical storage has become the preferred medium for software, music, and video. Digital versatile discs (DVDs) provide a significant increase in data storage and support features that are not available on any other video platform. These features include wide-screen movies, multiple language tracks, digital surround sound, multiple camera angles, and interactive menus.

For these reasons, your computer may come with a DVD-ROM drive or multi-function drive.

**TECHNICAL NOTE:** Your DVD-ROM or multi-function drive is set to play region 1 (North America) DVD-ROMs. If you play a DVD disc from another region, the drive will automatically change to play in the format of the other region. The drive will allow you to change regions four times. On the fourth change, the region will be “locked in.” That is, the drive will only play DVDs from that last region. Note that changing from region 1 to region 2 and back to region 1 is counted as two changes.

*Sample DVD-ROM drive shown*

**Drive in-use indicator light**—Indicates when the drive is in use.

**Eject button**—Press to release the disc tray.

**CAUTION**

Do not press the eject button or turn off the computer while the Drive in-use indicator light is glowing. Doing so could damage the disc or the drive.

When the disc tray is open, be careful not to touch the lens or the area around it. Doing so could cause the drive to malfunction.

**Manual eject hole**—Use if you need to release the disc tray when the power is off. Use a straightened paper clip or other narrow object to press the manual eject button located inside the hole.

**CAUTION**

Never use a pencil to press the eject button. Pencil lead can break off inside the computer and damage it.

## CD/DVD control buttons

The control buttons on the front edge of the computer let you play audio CDs when the computer is off. You can also use them to play CDs and DVDs when the computer is on.

### *CD/DVD control buttons on the front of the computer*

The **mode** button switches between the CD/DVD and digital audio modes. You can lock the mode to its current setting by pressing and holding the mode button for four seconds. When the mode button is locked, you cannot switch between the CD/DVD and digital audio modes. To unlock the mode button, press and hold it for four seconds.

The **previous track** button returns to the preceding track on the disc.

The **next track** button skips to the following track on the disc.

The **play/pause** button starts playing the disc or makes it pause if currently playing.

The **stop/eject** button stops a disc that is currently playing.

You can eject a disc by pressing the stop/eject button twice. Use this method to eject a disc when the computer is turned off and the sound subsystem is turned on.

## CD/DVD control and digital audio modes

The following chart describes CD/DVD control and digital audio modes.

|   | <i>CD/DVD Mode</i>  | <i>Digital Audio Mode</i>  |
|---|---|--|
| <b>Power is off and you press Play/Pause</b>                | <p>If a CD is in the drive, the system enters CD player mode and operates as a stand-alone CD player.</p> <p>If a DVD is in the drive, the operating system starts and the DVD player starts.</p> | <p>The operating system starts, the Media Player starts and the digital audio file begins to play.</p> |
| <b>While in CD/DVD mode, you press the mode button</b>      | DVD-ROM drive power turns off.  |  |
| <b>Operating system is running and you press Play/Pause</b> | <p>If a CD is in the drive, the Media Player starts and the digital audio file begins to play.</p> <p>If a DVD is in the drive, the DVD begins to play.</p>                                       | <p>Media Player starts and the digital audio file begins to play.</p>                                  |

## Inserting compact discs

To insert a compact disc into the drive:

- 1 Make sure the computer is turned on.
- 2 Make sure the in-use indicator light is off.
- 3 Press the drive's eject button.

---

The disc tray slides partially out of the drive (about 1 inch).

---

HINT: The drive will not open if the computer's power is off.

---

- 4** Grasp the tray and pull it fully open.

*The drive tray fully extended*

- 5** Hold the disc by its edges and check that it is free of dust.  
If the disc is dusty, clean it as described in [“Caring for CDs or DVDs Discs”](#) on page 85.
- 6** Place the disc carefully in the disc tray, label side up.

*Positioning the disc in the drive*

- 
- 7 Gently press the disc onto the center spindle until you feel it click into place.
- 

**CAUTION** Handle DVDs and CDs carefully, making contact only with the center hole and edge. Do not touch the surface of the disc. Do not stack discs. If you incorrectly handle the discs, you could lose data.

---

- 8 Make sure the disc is completely on the spindle and is lying flat on the tray.
- 

**CAUTION** If you insert the disc incorrectly, it may jam the drive. If this happens, contact your Toshiba support for assistance.

---

- 9 Push the disc tray in by pressing gently on the center of the tray until it clicks into place.

You are ready to use the disc.

## Removing compact discs

To remove a compact disc (CD or DVD) with the computer turned on:

- 1 Press the eject button on the drive.
- 

**CAUTION** Do not press the eject button while the in-use indicator light is glowing. Doing so could damage the disc or the drive.

Also, if the disc is still spinning when you open the disc tray, wait for it to stop spinning before you remove it.

---

- 2 Pull the tray until it is fully open, remove the disc, and place it in its protective cover.
- 3 Gently push the tray in to close it.

To remove a compact disc with the computer turned off:

- 1 Insert a slender object, such as a straightened paper clip, into the manual eject hole.
- 2 Gently pull the tray out until it is fully open, remove the disc, and place it in its protective cover.
- 3 Gently push the tray in to close it.

## **Caring for CDs or DVDs Discs**

- ❖ Store your discs in their original containers to protect them from scratches and keep them clean.
- ❖ Do not bend a disc or place heavy objects on top of it.
- ❖ Do not apply a label to, or otherwise mar the surface of a disc.
- ❖ Hold a disc by its outside edge. Fingerprints on the surface can prevent the DVD-ROM drive or multi-function drive from reading the data properly.
- ❖ Do not expose discs to direct sunlight or extreme heat or cold.
- ❖ To clean a disc that is dirty, wipe it with a clean, dry cloth. The most efficient method to clean it is to start from the center of the disc and wipe toward the outward edge (not in a circle). If necessary, moisten the cloth with water or a neutral cleaner (not benzine or rubbing alcohol). Let the disc dry completely before inserting it in the drive.

---

## Using PC Cards

---

TECHNICAL NOTE: For PCMCIA-compatible PC Cards, check the package to make sure they conform to the PCMCIA 2.1 standard (or later). Other cards may work with your computer, but are likely to be much more difficult to set up and use.

---

For information on inserting or removing a PC Card, see [“Inserting and removing PC Cards” on page 138.](#)

### Hot swapping

With PC Cards, you can replace one PC Card with another while the computer is on. This is called “hot swapping.”

### Hot swapping precautions

Although you can insert a PC Card at any time, remember not to remove a card while it is in use. Otherwise, you could lose valuable information. For example:

- ❖ Do not remove a hard disk card while the system is accessing it.
- ❖ Do not remove a network card while you are connected to a network.
- ❖ Do not remove a SCSI card while any of the SCSI devices connected to it are operating.

Before removing a PC Card, stop it by clicking the **Safely Remove Hardware** icon on the System tray. After the PC Card is stopped, it is safe to remove.

---

## Using SD® (Secure Digital) cards

If you do not already have a SD card inserted in the computer, you may do so following the procedures outlined in [“Inserting an SD® card” on page 140](#).

**Important:** Do not use the **Copy Disk** function for SD cards. In order to copy data from one SD card to another, use the following procedure:

- 1 Format the target SD card in the same format as the source SD card.
- 2 Insert the source SD card.
- 3 Create a temporary folder on the hard disk drive.
- 4 Copy the contents of the source SD card into the temporary folder you created in step 3.
- 5 Remove the source SD card.
- 6 Insert the target SD card created in step 1.
- 7 Copy the file contents from the temporary folder to the target SD card.
- 8 Eject the target SD card.

---

### NOTE

MMC cards (multimedia cards) do not work in this slot.

---

## Using your computer at the office

By connecting an external monitor, external full-size keyboard, and a mouse, you can work with your notebook as if it were a standard office computer.

An external monitor or projector connects to the RGB (monitor) port.

Any USB device can connect to the USB ports.

## Using a computer lock

For your own peace of mind, you may want to secure your computer to a heavy object such as your desk. The easiest way to do this is to purchase an optional PORT-Noteworthy® Computer Lock Cable.

*PORT-Noteworthy® Computer Lock Cable*

To secure the computer:

- 1 Loop the cable through or around some part of a heavy object.

Make sure there is no way for a potential thief to slip the cable off the object.

- 2 Pass the locking end through the loop.

- 3 Insert the cable's locking end into the security lock slot on the computer, then give the key a quarter turn and remove it.

The computer is now securely locked.

*Locking the computer*

---

## Caring for your computer

This section gives tips on cleaning and moving your computer. For information about taking care of your computer's battery, see “[Running the computer on battery power](#)” on page 100.

### Cleaning the computer

---

**CAUTION**

Keep liquids, including cleaning fluid, out of the computer's keyboard, speaker, and other openings. Never spray cleaner directly onto the computer. Never use harsh or caustic chemical products to clean the computer.

---

To keep your computer clean, gently wipe the display panel and exterior case with a lightly dampened cloth. Ask your Toshiba dealer for suggestions for appropriate cleaning products.

### Moving the computer

Before moving your computer, even across the room, make sure all disk activity has ended (the drive indicator light stops glowing) and all external peripheral cables are disconnected.

---

**CAUTION**

Do not pick up the computer by its display panel or by the back (where the ports are located).

---

Although your notebook computer is built to withstand reasonable shock and vibration, transport it in a carrying case for long trips. You can purchase a carrying case from your Toshiba dealer, through the accessories information packaged with your system, or visit [toshiba.com](http://toshiba.com).

---

## Backing up your work

Your computer comes with Recovery media that enable you to reinstall software that was preinstalled. This media can be used to install or reinstall particular Toshiba applications, utilities, and drivers. Back up all the files you create in case something happens to your computer. If you have a network partition, you can hold copies of your files there.

Alternatively, you can back up your files to diskette one at a time as you are working on them.

To back up several files at one time, use the Microsoft® Windows® backup program preinstalled on the computer's hard disk.

Complete information on the backup program is in the online Help and your Windows® documentation.

**HINT:** Backing up all the files on your hard disk takes a considerable amount of time and many diskettes. You may prefer to use a high-capacity backup system, such as an external tape drive.

---

## Restoring your work

To restore information from your backup media to your hard disk, use the Restore page in the backup program. Look in the online Help or your operating system documentation for information on restoring files.

**TECHNICAL NOTE:** When restoring files, the backup program prompts you if you try to overwrite a file that already exists on the hard disk. Make sure the backup version is the one you want before overwriting the existing file.

---

---

## Preparing for communications

To connect to the Internet, use an online service, or communicate across the telephone lines with another computer, you need:

- ❖ A modem (supplied with your computer)
- ❖ A telephone line
- ❖ A browser or communications program
- ❖ An Internet Service Provider (ISP) or an online service if you plan to use the Internet

Before you can use the modem, you must connect it to a standard voice-grade telephone line. See [“Connecting to a power source” on page 43](#) for details.

## Powering down the computer

---

### NOTE

Pushing the power button before shutting down the Windows operating system could cause you to lose your work. Make sure the system indicator panel's disk light and the drive-in use light are off. If you turn off the power while a disk is being accessed, you may lose data or damage the disk and/or drive.

---

When you power down the computer, you have three options to choose from: Turn Off Computer, Standby, and Hibernation.

**TECHNICAL NOTE:** Before using any of these options to power down your computer, save your files and make sure the disk activity lights are off.

If you change your mind and decide to continue working after all, wait a few seconds before turning the computer on again.

---

## Using Turn Off Computer or Shut Down

For the Windows XP Home operating system, follow these steps to shut down the computer:

- 1 Click **Start**, select **Turn off computer**.

The Turn off computer dialog box appears.

*Sample Turn off computer Windows dialog box*

- 2 Click **Turn Off**.

The computer shuts down completely.

For the Windows XP Professional operating system, follow these steps to shut down the computer:

- 1 Click the **Start** button, then **Shut down**.

The Shut Down Windows dialog box appears.

- 2 Select **Shut down** from the drop-down list.
- 3 Click **OK**.

The computer shuts down completely.

---

### NOTE

Holding the shift key while the Turn Off computer Windows dialog box is open, changes the Stand By button to hibernate. For more information about setting up hibernation, refer to [“Using Hibernation” on page 94](#).

---

## Shutting down more quickly

In addition, you can shut down the computer by pressing the power button.

To use either of these methods, you first need to turn it on in Toshiba's Power Saver utility.

- 1 Open the **Start** menu, click **Control Panel**, then **Performance and Maintenance**.

- 2 Click the **Toshiba Power Saver** icon.

- 3 Click on the **Setup Action** tab.

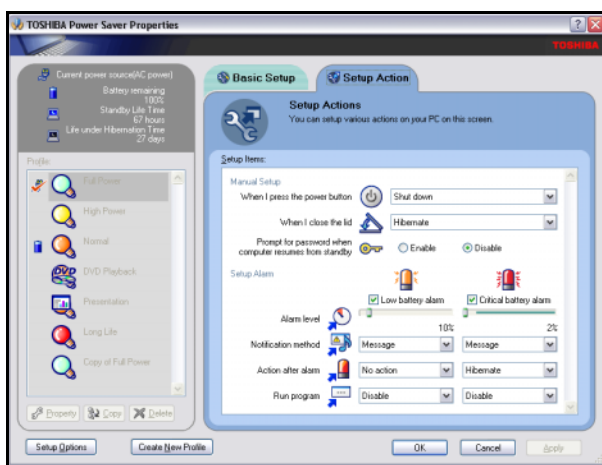

- 4 Select the options you want from the drop-down lists.

❖ **When I press the power button**

Set this option to **Shutdown** to have the computer shut down when you press the power button.

- 5 Click **Apply**.

- 6 Click **OK**.

*Sample system power mode settings*

**NOTE**

For more information about the Power Saver utility, see [“Power Management” on page 151](#).

## Starting again after Shut down

To start the computer up again, press the power button until the on/off light changes to blue.

If you shut down the computer by closing the display panel, you can start it again by opening the display panel.

## Using Hibernation

Hibernation mode shuts the computer down completely, but it first saves the current mode of the computer to the hard disk. Since Hibernation mode does not require power to maintain the saved information, the system settings are retained indefinitely. Restoring information from the hard disk takes longer than restoring it from memory. When you start up again, the computer runs a self-test, loads the operating system, and then returns to the mode in which you left it.

Factors to consider when choosing Hibernation:

- ❖ While in Hibernation mode, the computer uses no battery power
- ❖ Because the mode of the system is held on the hard disk, no data is lost if the main battery discharges
- ❖ When starting up again, Hibernation uses less time and battery power than does Turn off computer
- ❖ Restarting from Hibernation uses a little more time and battery power to start up than restarting from Standby, because information is being retrieved from the hard disk rather than from memory

- ❖ When starting up again, the computer returns to the mode in which you left it, including all open programs and files you were using

## Configuring your computer for Hibernation

- 1 Open the **Start** menu, click **Control Panel** then **Performance and Maintenance**.
- 2 Click the **Toshiba Power Saver** icon.
- 3 Click the **Setup Action** tab.
- 4 Select **Hibernation** for the options you want.
  - ❖ **When I press the power button**  
Set this option to **Hibernate** so that the computer will go into Hibernation mode when you press the power button.
  - ❖ **When I close the lid**  
Set this option to **Hibernate** so that the computer will go into Hibernation mode when you close the display panel.
- 5 Click **Apply**.
- 6 Click **OK**.

The computer is now set to automatically go into Hibernation when your option settings occur.

### NOTE

For more information about the Power Saver utility, see [“Power Management” on page 151](#).

Once the computer is configured, put the computer into Hibernation mode by either pressing the power button or closing the display panel, depending on the hibernation options taken.

## Starting again from Hibernation mode

To start up the computer from Hibernation mode, press the power button until the on/off light turns blue. The computer returns to the screen you were using.

If you put the computer in Hibernation mode by closing the display panel, you can start it again by opening the display panel.

## Using Standby

The Standby command puts the computer into a power-saving mode. Standby holds the current mode of the computer in memory so that, when you restart the computer, you can continue working from where you left off.

Factors to consider when choosing Standby:

- ❖ While in Standby mode, the computer uses some battery power. A fully charged main battery will last up to eight hours in Standby mode.
- ❖ Restarting from Standby uses less time and battery power than restarting from Turn off computer or Hibernation.
- ❖ When starting up again, the computer returns to the mode in which you left it, including all open programs and files you were using.

---

### NOTE

If you power down using the Standby command and the main battery discharges fully, your information will be lost. Be sure to save your work first.

---

To power down the computer using the Standby command, click **Start, Turn off computer**, and select **Stand By**.

*Sample Turn off computer Windows® dialog box*

#### NOTE

If you hold down the Shift key, Stand By becomes Hibernate in the Turn off computer dialog box. To enter hibernation mode, you must hold down the Shift key while you select Hibernate.

The computer saves the status of all open programs and files, turns off the display, and goes into a low-power mode. The on/off light blinks amber indicating the machine is in Standby mode.

### Going into Standby mode more quickly

In addition, you can put the computer into Standby mode by either pressing the power button or closing the display panel. You can also specify an amount of time after which the computer automatically goes into Standby mode.

To use any of these methods, you first need to enable them in Toshiba's Power Saver utility.

- 1 Open the **Start** menu, click **Control Panel** then **Performance and Maintenance**.
- 2 Click the **Toshiba Power Saver** icon.
- 3 Click the **Setup Action** tab.
- 4 Select **Standby** for the options you want.

❖ **When I press the power button**

Set this option to **Standby** to put the computer into Standby mode when you press the power button.

❖ **When I close the lid**

Set this option to **Standby** to put the computer into Standby mode when you close the display panel.

**5** Click **Apply**.

**6** Click **OK**.

---

**NOTE**

For more information about the Power Saver utility, see [“Power Management” on page 151](#).

---

## Starting again from Standby mode

To start up the computer from Standby mode, press the power button until the on/off light changes to blue. The computer returns to the screen you were using.

If you put the computer in Standby mode by closing the display panel, you can start it again by opening the display panel.

## Toshiba's online resources

Toshiba maintains a number of online sites to which you can connect. These sites provide information about Toshiba products, give help with technical questions and keep you up to date with future upgrades. For more information, see [“Contacting Toshiba” on page 186](#).

# Chapter 3

## Mobile Computing

---

### **Toshiba's energy-saver design**

Your computer enters a low-power, standby mode when it is not being used, thereby conserving energy and saving money in the process. It has a number of other features that enhance its energy efficiency. Many of these energy-saving features have been set by Toshiba. We recommend you leave these features active, allowing your computer to operate at its maximum energy efficiency, so that you can use it for longer periods of time while traveling.

For more information on managing your power usage, see [“Power profiles in Windows XP” on page 110](#).

This chapter covers all the aspects of using your computer on battery power.

---

## Running the computer on battery power

The computer contains a removable Lithium-Ion (Li-ion) battery pack that provides power when you are away from an AC outlet. This is the main battery. You can recharge it many times.

---

**TECHNICAL NOTE:** For optimum DVD performance, always play DVDs while your computer is connected to AC power.

---

## Battery Notice

To ensure that the battery maintains its maximum capacity, operate the computer on battery power at least once a month until the battery is fully discharged. Please see [“Maximizing battery life” on page 101](#) for procedures. If the computer is continuously operated on AC power, either through an AC adapter or a docking station (if applicable to your system), for an extended period (more than a month), the battery may fail to retain a charge. This may shorten the life of the battery, and the battery light may not indicate a low-battery condition.

The RTC battery powers the RTC memory that stores your system configuration settings and the current time and date information. It maintains this information for up to a month while the computer is turned off.

---

**TECHNICAL NOTE:** The RTC battery does not charge while the computer is turned off, even when AC power is attached.

---

## Charging the battery

To charge the main battery while it is in your computer, plug the computer into a live electrical outlet. The battery charges whether the computer is on or off.

The main battery light () glows amber while the battery is being charged, and glows blue when it is fully charged.

The battery may not start charging immediately under the following conditions:

- ❖ The battery is extremely hot or cold. To ensure that the battery charges to its full capacity, wait until it reaches room temperature.
- ❖ The battery is almost completely discharged. Leave the power connected and the battery should begin charging after a few minutes.

## Maximizing battery life

To maximize the life of your battery pack:

- ❖ At least once a month, disconnect the computer from a power source and operate it on battery power until the battery pack fully discharges. Before doing so, follow the steps below:
  - 1 Turn off the computer's power.
  - 2 Disconnect the AC adapter and turn on the computer's power. If it does not turn on, go to step 4.
  - 3 Operate the computer on battery power for five minutes. If the battery pack has at least five minutes of operating time, continue operating until the battery pack is fully discharged. If the battery light LED flashes or there is some other warning to indicate a low battery, go to step 4.
  - 4 Connect the AC adapter to the computer and the power cord to a power outlet. The DC-IN or AC power-light LED should glow blue, and the Battery LED should glow amber to indicate that the battery pack is being charged. If the DC-IN or AC power-light indicator does not glow, power is not being supplied. Check the connections for the AC adapter and power cord.

- 5** Charge the battery pack until the Battery LED glows blue.
- ❖ If you have extra battery packs, rotate their use.
  - ❖ If you will not be using the system for an extended period, more than one month, remove the battery pack.
  - ❖ Disconnect the AC adapter when the battery is fully charged. Overcharging makes the battery hot and shortens life.
  - ❖ If you are not going to use the computer for more than eight hours, disconnect the AC adapter.
  - ❖ Store spare battery packs in a cool dry place out of direct sunlight.

## **Charging the RTC battery**

Your computer has an internal real-time clock (RTC) battery. The RTC battery powers the System Time Clock and BIOS memory used to store your computer's configuration settings. When fully charged it maintains this information for up to a month when the computer is powered off.

The RTC battery may have become completely discharged while your computer was shipped, resulting in the following error message during startup:

```
BAD RTC BATTERY  
BAD CHECKSUM (CMOS)  
CHECK SYSTEM
```

To recharge the RTC battery, connect the computer and leave it powered on for 24 hours.

**⚠ CAUTION**

The computer's RTC battery is a Lithium Ion (Li-Ion) battery and should be replaced only by your dealer or by a Toshiba service representative. The battery can explode if not properly replaced, used, handled or disposed of. Dispose of the battery as required by local ordinances or regulations.

The main battery light (🔌) glows amber while the battery is being charged, and glows blue when it is fully charged.

The battery may not start charging immediately under the following conditions:

- ❖ The battery is extremely hot or cold. To ensure that the battery charges to its full capacity, wait until it reaches room temperature.
- ❖ The battery is almost completely discharged. Leave the power connected and the battery should begin charging after a few minutes.

## Monitoring battery power

The computer's main battery light gives you an indication of the main battery's current charge:

- ❖ Blue indicates the AC adapter has fully charged the battery.
- ❖ Amber indicates the AC adapter is charging the battery.
- ❖ Off indicates that the battery is not being charged.

**NOTE**

Battery life and charge time may vary depending upon power management settings, applications and features used.

- 
- ❖ Flashing amber indicates that the computer is using battery power, and the battery's charge is running low.
- 

HINT: Be careful not to confuse the battery light (🔋) with the on/off light (🔌). When the on/off light flashes amber, it indicates that the system is suspended (using Windows® XP Standby command).

---

## Displaying remaining battery power

You can monitor the battery's remaining charge. The computer calculates the remaining battery charge as it operates, based on your current rate of power use.

To show remaining power:

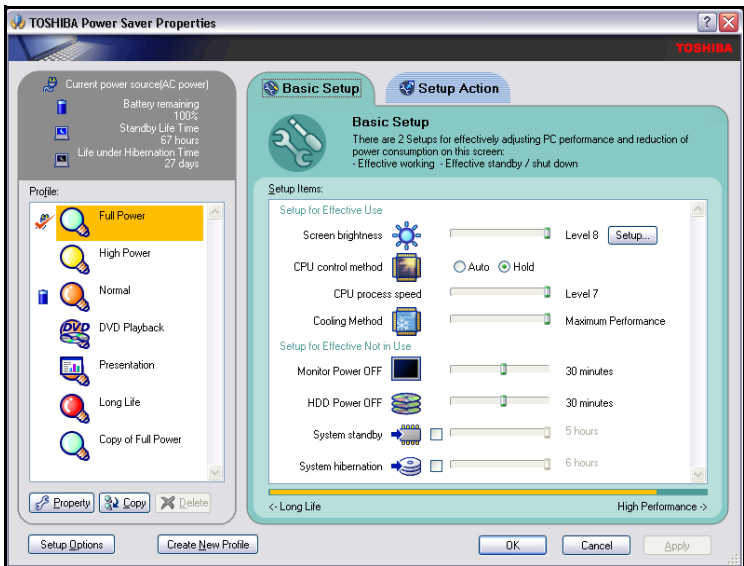

- 1 Open the **Start** menu, click **Control Panel** then **Performance and Maintenance**.

- 2 Click the **Toshiba Power Saver** icon.

The Toshiba Power Saver Properties dialog box appears.

### Sample Toshiba Power Saver Properties Dialog Box

The remaining battery charge is indicated on the top left side of the dialog box.

With repeated discharges and recharges, the battery's capacity will gradually decrease. A frequently used older battery will not power the computer for as long as a new battery, even when both are fully charged.

**HINT:** Wait at least 16 seconds after turning on the computer before trying to monitor the remaining battery power. The computer needs this time to check the battery's remaining capacity and perform its calculations.

The computer drains battery power more quickly at low temperatures. Check your remaining charge frequently if you're working in temperatures below 50 degrees Fahrenheit.

The Windows® operating system has additional power management options that can be accessed through an icon in the Control Panel. For more information, see [“Power Management” on page 151](#).

## What to do when the battery alarm sounds

Your Satellite® M30/M35 Series computer can be configured to warn you of a low battery charge condition so you may take the necessary steps to save your work.

Your Windows® operating system offers two alarms before your system shuts down.

To change the default alarm settings:

- 1 Open the **Start** menu, click **Control Panel** then **Performance and Maintenance**.
- 2 Click the **Toshiba Power Saver** icon.
- 3 Click the **Setup Action** tab.
- 4 Select the **Alarm** settings in the Setup Alarm section.

Before your computer runs out of battery power, save your data and take one of the following actions:

- ❖ Suspend or shut down your computer.
- ❖ Shut down your computer and replace the main battery with a charged one.
- ❖ Connect your computer to an AC power source.

---

## Changing batteries

---

**CAUTION**

When handling battery packs, do not drop or knock them. Also be careful not to damage the casing or short-circuit the terminals.

---

To change the battery:

- 1 Save your work.
- 2 Shut down and turn off the computer.
- 3 Remove all cables connected to the computer.
- 4 Turn the computer over.
- 5 If the battery lock is in the locked position, slide it toward the unlocked position.
- 6 Slide the battery release latch to release the battery.

*Battery release latch*

- 7 Pull the discharged battery out from the back of the computer.

*Removing the discharged battery*

**⚠ WARNING**

If the battery is leaking or its case is cracked, put on protective gloves to handle it, and discard it immediately following the advice in [“Disposing of used batteries” on page 109](#).

- 8** Wipe the terminals of the charged battery with a clean cloth to ensure a good connection.
- 9** Insert the charged battery into the slot until the latch clicks.

The battery pack has been designed so that you cannot install it with reverse polarity.

**⚠ CAUTION**

If the battery does not slide into the slot easily, move the battery release lock to the unlocked position and try again. Do not force the battery into position.

- 10** Reset the battery lock to the locked position.
- 11** Turn the computer right side up.
- 12** Reconnect any cables.
- 13** Restart the computer.

---

## Disposing of used batteries

The life of a battery pack should last for years. When the battery pack needs replacing, the main battery light flashes amber shortly after you have fully recharged the battery.

You must discard a battery if it becomes damaged.

---

### **⚠ WARNING**

The computer's main battery is a Lithium-Ion (Li-Ion) battery, which can explode if not properly replaced, used, handled, or disposed of. Putting spent batteries in the trash is not only irresponsible, it may be illegal. Dispose of the battery as required by local ordinances or regulations.

Use only batteries recommended by Toshiba.

---

After repeated use, the batteries will finally lose their ability to hold a charge and you will need to replace them. Under federal, state and local laws, it may be illegal to dispose of old batteries by placing them in the trash.

Please be kind to our shared environment. Check with your local government authority for details regarding where to recycle old batteries or how to dispose of them properly. If you cannot find the information you need elsewhere, call Toshiba at: 1 (800) 457-7777.

## Conserving power

How long a fully charged battery pack lasts when you are using the computer depends on a number of factors, such as:

- ❖ How the computer is configured.
- ❖ How much you use the hard disk, DVD-ROM or multi-function drive, and diskette drives, or other optional devices.
- ❖ Where you are working, since operating time decreases at low temperatures.

There are various ways in which you can conserve power and extend the operating time of your battery:

- ❖ Enable Standby or Hibernation, which saves power when you turn off the computer and turn it back on again.
- ❖ Use Toshiba's power-saving options.

These power-saving options control the way in which the computer is configured. By using them, you can greatly increase the length of time you can use the computer before you need to recharge the battery.

Toshiba has combined these options into preset power profiles. Using one of these profiles lets you choose between maximum power savings and peak system performance. You may also set individual power-saving options to suit your own needs.

The following sections describe how to choose a power profile and discuss each power-saving option.

## Power profiles in Windows XP

In Windows® XP, you can choose from predefined power profile or select your own combination of power management options. To do this:

- 1 Open the **Start** menu, click **Control Panel** then **Performance and Maintenance**.
- 2 Click on the **Toshiba Power Saver** icon.
- 3 Select an appropriate profile for your work environment, or create your own custom profile.
- 4 For more information, see [“Power Management” on page 151](#).

## Using a hot key to set the power profile

You may use a hot key to set the power profile.

To set the power profile:

- 1 Press Fn and F2 simultaneously to display the power profile pop-up window.

*Sample Power Profile mode pop-up window*

- 2 While continuing to press Fn, press F2 until you select the desired power profile.

The power profile options are: Full Power, High Power, Normal, DVD Playback, Presentation, and Long Life.

- 3 Release the Fn key.

The pop-up window disappears. You're now in the selected mode.

For more information on setting the battery power profile, see [“Power Management” on page 151](#).

## Additional options for power

Depending on the amount of time you spend away from external power sources, the capacity of one battery pack may be sufficient for your needs. However, if you need more portable power, Toshiba provides these options:

- ❖ Purchase extra battery packs.
- ❖ Purchase a battery charger that charges one main battery pack and one secondary battery pack at a time.

# Chapter 4

## Expansion Options

---

Your computer is designed to work in the office as well as on the road. This chapter explains how to set up the various optional devices so that your notebook can provide all the convenience of a traditional desktop computer.

### Devices for office computing

By connecting optional devices such as an external monitor, a full-size keyboard and a mouse, you can work with your notebook as if it were a standard office computer.

You can connect any of these optional devices:

- ❖ Expansion memory modules
- ❖ Standard 101-key keyboard
- ❖ Mouse or trackball
- ❖ Printer
- ❖ PC Cards

Some of these devices listed are Toshiba devices, others are standard computer components.

---

The devices manufactured by Toshiba can be purchased through Toshiba's Web site: [toshiba.com](http://toshiba.com), or through the accessories information packaged with your computer.

## Connecting external (optional) devices

You can connect an external monitor through the video-out port on the back of your computer.

## Using an external keyboard

If you prefer to use a full-size keyboard, you can attach one to your computer. The computer's USB ports supports any USB-compatible keyboard.

## Using a mouse

If you prefer, you can use a mouse instead of the computer's built-in pointing device — the TouchPad. You can use a USB-compatible mouse.

---

**TECHNICAL NOTE:** With a USB mouse, you can choose to have the TouchPad active at the same time.

---

## Connecting a USB mouse

To connect a USB mouse, connect the mouse cable to the USB port on the computer. Once connected, the mouse is ready to use.

## Using a printer

Before you can connect a printer, you must determine whether it requires a parallel, infrared, or a USB interface. Check the printer's documentation. If you can configure the printer as either a serial or a parallel device, set it up for parallel operation.

---

You also need a suitable printer cable, which may have been provided with your printer. If not, your company may keep a stock of cables. Otherwise, you can purchase one from a computer or electronics store.

---

**TECHNICAL NOTE:** If your printer is ECP- or IEEE-compliant, make sure your printer cable is an IEEE 1284 cable.

---

## Connecting a parallel printer

Parallel printers are the most common type of printer in use today. These instructions assume you have a parallel printer.

- 1 If you have been using the computer, turn it off.
- 2 If the computer is connected to an AC power source, disconnect the AC adapter.

---

### CAUTION

Never connect the printer cable while the computer is on. Doing so may damage the printer, the computer, or both.

---

- 3 Connect the printer cable to the printer and to the computer's parallel port. Use the printer cable illustration as a connection guide.

### *Identifying the ends of a parallel printer cable*

- 4 Plug the printer's power cable into a live electrical outlet.
- 5 See your printer documentation for additional configuration steps.

For more information on getting your printer to print, see [“Printing your work” on page 78](#).

---

## Setting up your printer

Setting up a printer involves selecting a printer driver. This special program acts as a translator that turns your document into a form the printer can understand.

If you are using any non-Windows® programs, set up a printer driver for each of those programs. Refer to your program's documentation for more information.

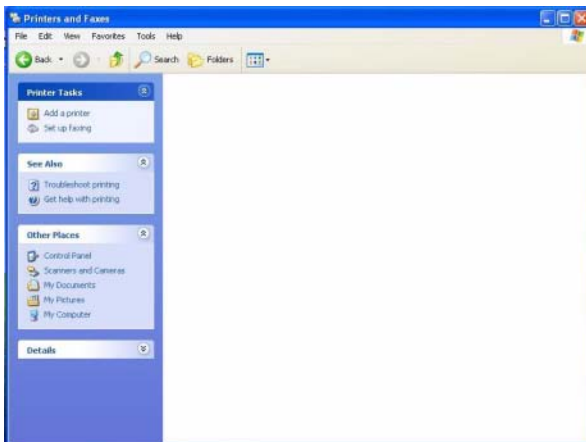

**TECHNICAL NOTE:** If you have the manufacturer's disk that came with your printer, you can use it to install the printer on your computer. The manufacturer's disk may include additional drivers and fonts.

---

To set up a printer with the Add Printer Wizard:

- 1 Click **Start**, and click **Printers and Faxes**.

The operating system opens a Printers and Faxes window.

*Sample Printers and Faxes window*

- 2 Click **Add Printer**.

The Add Printer Wizard appears.

*Sample Add Printer Wizard dialog box*

**3** Click **Next**.

The Add Printer Wizard asks you to select your printer.

---

**TECHNICAL NOTE:** If your printer is Plug and Play, the Windows® XP operating system recognizes it automatically. You can ignore the remainder of this section. See your printer manual.

---

**4** If the printer you are setting up:

- ❖ Is not connected to a network, select **Local printer attached to this computer**.
- ❖ Is connected to a network, select **Network printer, or a printer attached to another computer**.

**5** Click **Next**.

The Add Printer Wizard looks for a Plug and Play printer. If it does not locate one, click **Next**.

The Add Printer Wizard prompts you for the printer port.

- 
- 6** Select the port settings according to the instructions in your printer's documentation and the port to which your printer is connected, then click **Next**.

The wizard prompts you to select your printer.

- 7** From the list of manufacturers and printers, select your printer, then click **Next**.

The Add Printer Wizard prompts you to enter a "friendly" printer name.

- 8** Enter a name for your printer.

HINT: If you are using more than one printer, make sure the name is descriptive enough to help you tell the difference.

---

- 9** If you want this printer to be:
- ❖ The default printer, click **Yes**.
  - ❖ Available when specifically requested, click **No**.

- 10** Click **Next**.

- 11** Click **Finish**.

The Windows® XP operating system prints a test page.

- 12** To complete the setup, click **OK**.

You are now ready to print.

Depending on your program, you may see various messages indicating the status of your print job.

TECHNICAL NOTE: Some printers require a specific installation process. In this case, the Windows® XP operating system Add Printer Wizard will display an error message. If this happens, refer to your printer installation guide for further instructions.

---

## Using the Wi-Fi® Wireless LAN Mini PCI module

Your computer may have an integrated Wi-Fi Wireless LAN Mini PCI module. It is recommended that you do not remove the module from your computer. For assistance, contact a Toshiba Wireless Authorized Service Partner.

For systems equipped with Wi-Fi, flip the wireless on/off switch to the On position.

# Chapter 5

## Enhancing Productivity

---

In this chapter, you will explore some of the special features of your Satellite® Series notebook computer.

### Exploring the desktop

The desktop is the launching pad for everything you can do in the Windows® XP Home or XP Professional operating system. You use its features to start programs, find documents, set up system components, and perform most other computing tasks.

**HINT:** The illustrated examples in this guide may appear slightly different from the screens displayed by your system. The differences are not significant and do not indicate any change in the functionality of your system.

---

### Finding your way around the desktop

Your computer's desktop includes several standard features: icons, Start button, taskbar, system tray, and background pattern.

*Sample Windows® XP operating system desktop*

## Icons

An icon represents a folder, file, or program that can be quickly activated by double-clicking the icon.

You can create a new desktop icon for any folder, file, or program by dragging the element's icon from its location in a window to the desktop area.

The icons initially displayed on your system desktop include:

**Recycle Bin** — Holds files you have deleted. You may be able to retrieve these files until you empty the Recycle Bin.

**TECHNICAL NOTE:** If you delete a file from a diskette, it does not go into the Recycle Bin. For more information on the Recycle Bin, see Windows online Help.

Internet Explorer — The Microsoft® browser that provides access to the Internet.

---

**NOTE**

If you place the cursor over an icon, a popup description of the file contents appears.

---

Your desktop may contain other icons depending on your configuration. See Windows® XP online help for more specific information on each icon and how to use it.

## Start button

You use the Start button to:

- ❖ Start programs
- ❖ Access Microsoft® Windows® XP operating system update information
- ❖ Open documents
- ❖ Adjust system settings
- ❖ Find files
- ❖ Access Windows® Help
- ❖ Run programs
- ❖ Suspend system activity and shut down the computer

## Taskbar

Each time you open a program, a button associated with that program appears on the taskbar. With some programs, a button appears on the taskbar for each document or window you open. You can use these buttons to quickly switch between the programs or windows.

To make a program or window the currently active one, click the associated taskbar button.

---

You can personalize the taskbar to include not only shortcut icons but also your favorite Internet URL addresses.

---

**DEFINITION:** URL stands for Uniform Resource Locator, which is the address that defines the route to a file on the Web or any other Internet facility. Generically, it is known as the Web site address.

---

## System tray

The System tray displays icons of tasks or programs that run continuously in the background. To learn more about each task, position the cursor over the icon for a few moments and a short description of the task appears.

Typical tasks in the System tray are Current time, Power usage mode, Mouse properties, and speaker volume.

To activate a specific task, double-click the appropriate System tray icon.

## Exchanging data with another computer

To transfer a large amount of information between computers, you can use the Windows® XP Briefcase, or a specialized synchronization program and the computer's parallel port.

## Transferring files

You can transfer files to another computer using your infrared port, or with an adapter cable.

To transfer files through the parallel port, you need an optional LapLink®-compatible parallel cable.

- 1 Connect the cable.
- 2 Load the transfer program on both computers.

- 3 Set any specific options.
- 4 Start the transfer.
- 5 When you have finished transferring files, close the programs on both computers.

## Getting help transferring files

- 1 Click **Start**, then **Help and Support**.
- 2 Click the **Index** icon on the toolbar.
- 3 In the dialog box, type direct cable connection.
- 4 Follow the online guide instructions.

## Setting up for communications

In order to connect to the Internet, use an online service, or communicate across the telephone lines with another computer, you need:

- ❖ A modem (one comes with your Satellite® M30/M35 Series computer)
- ❖ A telephone line
- ❖ A browser or communications program
- ❖ An Internet Service Provider (ISP) or online service if you plan to use the Internet

## Determining the COM port

Your modem is connected to one of the computer's COM (communications) ports. The default setting for the modem is COM3.

The following procedure is intended to support you if you need to either upgrade your modem or reset the port to the default settings.

If you're having trouble connecting through the modem, you may need to determine the current COM port name and possibly change it.

To find out which port your modem is connected to:

**1** Open the **Start** menu, click **Control Panel**.

**2** Click **Phone and Modem Options**.

The **Phone and Modem Options** Properties dialog box displays.

**3** Click the **Modems** tab.

Your modem should be listed next to one of the computer's COM ports.

**4** Make a note of the COM port number.

**5** To verify that the modem is set up properly, select the modem you wish to check, and then click **Properties** to bring up the dialog box with information specific to that modem.

**6** Click the **Diagnostics** tab, and then click **Query Modem**.

Windows XP communicates with the modem and displays identifying information reported by the modem. If Windows XP cannot communicate with the modem, it displays an error message. Consult the troubleshooting sections of your modem and Windows XP documentation.

**7** Click **OK** to close the properties dialog box for that specific modem.

**8** Click **OK** to close the Modem Properties dialog box.

**9** Close the Control Panel.

## Connecting the modem to a telephone line

Before you can use the modem, you must connect it to a standard voice-grade telephone line. For more information, see [“Connecting to a phone line” on page 143](#).

---

## Connecting your computer to a network

You can connect your computer to a network to increase its capabilities and functionality using one of its communication ports.

### Accessing a network

To access a network:

- ❖ At the office, connect an Ethernet cable to the RJ45 jack on your computer. For specific information about connecting to the network, consult your network administrator.
- ❖ While you are at home or traveling, you need a dial-up connection. Ask your network administrator for the telephone number of the network.

### Setting up the connection

To set up an office connection, consult your network administrator for network settings and additional considerations.

To set up a dial-up connection, use the New Connection Wizard:

- 1 Click **Start** and point to **All Programs**.
- 2 Point to **Accessories**, then to **Communications**, and click **New Connection Wizard**.
- 3 Enter the phone number of your network connection and let the program dial the number.

The computer connects to the network.

### Using the Ethernet LAN Port

When your computer starts, Windows attempts to contact a Dynamic Host Configuration Protocol (DHCP) server. If the computer is not connected to a network, it may pause a few

minutes as it waits for a reply. To avoid this delay, you can reconfigure Windows to disable the LAN port.

To disable the LAN port:

- 1** Click **Start**, click **Control Panel** then **Performance and Maintenance**.
- 2** Click the **System** icon, then click the **Hardware** tab, and then click the **Device Manager** button.
- 3** Select **Intel® Pro/100 VE Network Connection in Network adapters**.
- 4** Click **Actions**.
- 5** Select the **Properties** icon.
- 6** Select the **Do not use this device (disable)** option from the **Device usage** drop-down.
- 7** Click **OK**.

Your LAN port is now disabled.

To enable the Ethernet LAN port, repeat steps one through four. Select the **Use this device (enable)** check box, and click **OK**.

## Setting up a wireless connection

For information on how to set up a wireless connection, refer to your wireless networking device documentation or your network administrator.

## Using Wireless LAN Connectivity

Your system may come with an optional wireless LAN module. This is a technology that expands wireless communication beyond networking equipment, and can connect many different kinds of electronic devices without the need for cables. This feature uses the 2 GHz or 5 GHz frequency band for wireless communications, and can transmit at data rates up to 54 MBps. The range (through

---

walls and floors) of the wireless transmission is up to 100 feet.

To use your wireless communication, flip the wireless on/off switch to the On position.

## **An overview of using the Internet**

The following sections give a quick introduction to the Internet and some of its exciting features, under these headings:

- ❖ [The Internet](#)
- ❖ [The World Wide Web](#)
- ❖ [Internet Service Providers](#)
- ❖ [Connecting to the Internet](#)
- ❖ [Surfing the Internet](#)
- ❖ [Internet features](#)
- ❖ [Uploading and downloading files from the Internet](#)

### **The Internet**

The Internet is an association of thousands of networks and millions of computers around the world connected by communications lines. They all work together to share information.

### **The World Wide Web**

The World Wide Web (or “Web”) is a subset of the Internet — a collection of interlinked documents (located on computers connected to the Internet) that work together using a specific Internet protocol called Hypertext Transfer Protocol (HTTP).

The World Wide Web offers information as text, images, audio, or video to be referenced from anywhere in the world. Special programs called Web browsers are specifically

designed to work with HTTP. They make it easier to connect to a particular network address and send and receive information.

## Internet Service Providers

To connect a computer directly to the Internet, many people and businesses use an Internet Service Provider (ISP). An ISP is a company that has the equipment and the telecommunication lines necessary to maintain an Internet connection.

You can connect to the Internet by using a telephone and modem or through other higher-speed communication methods such as Digital Subscriber Lines (DSL), cable, and satellite links.

## Connecting to the Internet

To connect to the Internet, you need:

- ❖ A modem and telephone line, or a LAN connection
- ❖ A Web browser
- ❖ An Internet Service Provider (ISP) account

The Microsoft® Web browser Internet Explorer is automatically configured on your system so that when you first start it, it guides you through signing up for a new ISP account, or assists you in setting up your computer to work with your existing ISP.

Once you have established an ISP account, you can connect to the Internet.

- 1 Connect your computer's modem to a telephone line.  
For more information on connecting a modem, see  
[“Connecting your modem to a telephone line” on page 142.](#)

- 2 Start your Web browser. Have your modem dial the ISP's telephone number, and establish a connection with the ISP's computer.

---

If you are using your computer at the office, then you probably connect to the Internet through your company's network. See your network administrator about connecting to the Internet.

## Surfing the Internet

Once connected to the Internet, the Web browser displays a home page, for example, your ISP's home page on the Internet or your company's Web site home page.

To visit a desired Web site, type in the Web address. The Web address, or Uniform Resource Locator (URL), is a unique identifier for that computer system linked to the Internet. Web addresses can also appear within a Web page's text, and are known as links. Clicking a link automatically transfers your Web browser to that site.

You can also use a Search Engine, a Web site specifically designed to help you look for information.

## Internet features

The Internet offers many types of communication tools to help you perform many tasks.

### ❖ Internet email

To send and receive email of your own, you need a mailbox on the Web, or an email address.

If you have an account with an ISP, you can probably set up an email address at the same time you sign up for the service.

### ❖ Internet chat rooms

A chat room is a Web site that offers a place where people with similar interests and ideas communicate in real-time, one-on-one or in groups, by typing messages which are instantly viewed by others on their computer screens.

### ❖ Internet news groups

A news group is similar to a chat room, but instead of using a dedicated site to converse about a specialized subject with others in real-time, it uses a Web site as a clearinghouse where all the messages are placed, like a gigantic bulletin board.

❖ **Online shopping**

Many Web sites offer products and services for sale.

## **Uploading and downloading files from the Internet**

Transferring files from one computer to another is termed uploading (transferring data from your computer to a site on the Web), or downloading (transferring data from a site on the Web to your computer).

There are several ways to upload or download data. It can be as simple as attaching a file or document to an email, or you can use the File Transfer Protocol (FTP) features of your Web browser to transfer large amounts of data.

## **Exploring audio features**

You can use your computer to record sounds using an external microphone or the computer's built-in microphone which is located to the left of the CTRL key on the keyboard. You can play .wav sound files or audio CDs using the built-in speakers, headphones or external speakers.

## **Playing an audio CD**

Insert an audio CD and close the disc tray.

If the computer is turned on, Windows Media™ Player opens and the CD begins to play. You can use the Windows Media™ Player program to control the CD.

If the computer is off, you may press the Mode button until the CD/DVD mode LED comes on, then press Play to play the CD. You can use the CD/DVD control buttons to control the CD.

---

To access the Windows Media™ Player, you can open it through the Start menu or activate it from the taskbar.

---

**NOTE**

When using Windows Media Player, your system may not be able to activate Standby or Hibernation modes. To prevent this from occurring, close Windows Media Player before you select Standby or Hibernation mode.

---

*Sample Windows Media™ Player screen*

The CD Player control panel works much like an ordinary compact disc player:

- ❖ To play the CD or to pause, click the **Play/pause** button on the CD Player control panel.
- ❖ To stop the CD, click the **Stop** button.

---

**⚠ WARNING**

Before using headphones to listen to an audio CD, turn the volume dial down. Playing the CD with the volume set too high could damage your ears.

---

## Playing CDs using Auto-Run

If you insert a CD into the DVD-ROM/multi-function drive and the Auto-Run feature does not automatically start your disk, try launching the CD manually. To do this, follow these steps:

- 1 Open the **Start** menu and select **My Computer**.
- 2 Click the DVD-ROM/multi-function drive icon.

The disk drive will run the CD.

If your disk does not run using this method, try using an application that is associated with the media on the disk. For example, if it is a music CD, open Windows® Media Player and point it to play the CD. For other types of media, use the associated software to open the files on the disk.

## Creating a CD

Your computer may come with a multi-function drive that allows you to:

- ❖ Play pre-recorded DVDs
- ❖ Play pre-recorded CDs
- ❖ Read and write files (including music) to a CD-Recordable (CD-R), CD-Rewritable (CD-RW) disc, DVD-R/-RW or a DVD RAM.

For details on how to use the software, please refer to the respective Online Help menus.

## Recording sounds

You may record sounds as .wav files by connecting an external microphone or other sound source to the microphone jack. You may also record sounds using the computer's built-

in microphone located to the left of the CTRL key on the keyboard.

**DEFINITION:** A .wav (pronounced “wave”) file is a Windows® format for storing sound.

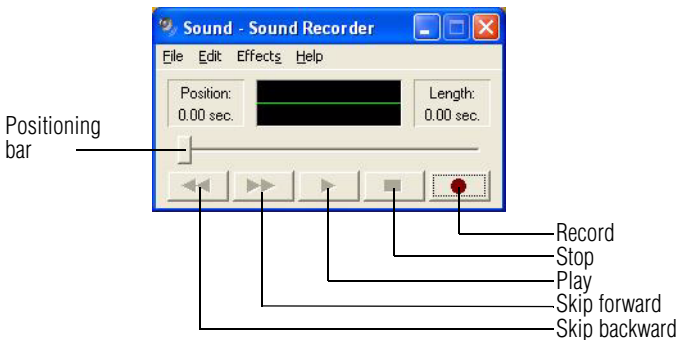

**TECHNICAL NOTE:** If you record MP3 files, you will only be able to play them on a device capable of playing MP3 files.

## Using a microphone

- 1 Connect an external microphone to the computer.
- 2 Click **Start**, point to **All Programs, Accessories, Entertainment**, then click **Sound Recorder**.

*Sample Sound Recorder screen*

- 3 Click the **Record** button.

- 4 Speak normally into the microphone.

- 5 When you’ve finished recording, click the **Stop** button.

---

The Sound Recorder window displays the new sound file as a waveform.

---

**NOTE**

You can only record 60 seconds at a time.

---

**6** To hear what you just recorded, click the **Play** button.

**7** To save the file, select **Save** from the **File** menu.

## Adjusting recording quality

The better the quality of the recording, the more disk space the sound file requires. Experiment to find a balance that fits your needs.

**1** Open Sound Recorder, if necessary. (Click **Start**, point to **All Programs**, **Accessories**, **Entertainment**, then click **Sound Recorder**.)

**2** In the Sound Recorder window, click **Edit**, then click **Audio Properties**.

**3** In the Audio Properties dialog box, adjust the Recording Volume, Preferred device, and Preferred quality.

**4** Click **OK**.

Your new settings take effect the next time you record.

---

## Using external speakers or headphones

Your computer is equipped with a full stereo sound system with internal speakers. Instead of using the internal speakers, you can connect headphones or a pair of external stereo speakers.

**TECHNICAL NOTE:** Use amplified speakers that require an external power source. Other types of speakers will be inadequate to produce sound from the computer.

---

To play back sound files through external speakers or headphones:

- 1 Locate the headphone jack on the computer.
- 2 Using any necessary adapters, plug the cable from the headphones or external speakers into the headphone jack.

The headphone jack requires a 16-ohm stereo mini-jack.

To adjust the volume:

- ❖ For external speakers, use the volume controls on each speaker.
- ❖ For headphones, use the computer's volume control dial.

## Inserting and removing hard drives

Your Satellite® M30/M35 can use various hard drive capacities. Depending upon the original hard drive installed in your computer, you may wish to increase storage capacity by changing the internal drive, or you can also add additional hard drive space by inserting a drive into the select bay module.

To change the internal hard drive:

- 1 Shut down your computer completely using the Shut Down command. See [“Powering down the computer”](#) on page 91.
- 2 Unplug the computer.
- 3 Close the display panel and remove any cables you may have connected.
- 4 Turn the computer upside down.
- 5 Remove the screw on the hard drive cover.

### *Removing the hard drive cover screw*

- 6 Lift the edge of the hard drive cover and lift it up to expose the hard drive.

- 7** Grasp the edge of the hard drive and pull it toward the edge of the computer, then lift it straight up to remove it.

*Removing the hard drive from the computer*

- 8** Install the new hard drive by setting it into the hard drive slot and sliding back toward the center of the computer until it locks. Do not force the drive into the computer.

*Inserting the new hard disk drive*

- 9** Replace the hard drive cover and tighten the screw removed in step 5 above.

---

## Inserting and removing PC Cards

Your Satellite® M30/M35 Series computer comes with one PC Card slot and supports two types of PC Cards:

- ❖ Type I cards—You can install one of these cards, one in each slot.
- ❖ Type II cards—You can install one of these cards, one in each slot.

### Inserting a PC Card

---

**NOTE**

Use caution when lifting or turning your computer. Failure to do so may result in damage to components, such as cables, attached to your computer, or to the computer itself.

---

Before you insert a PC Card, refer to the documentation that comes with the card to see if you need to do anything before you insert it.

To insert a PC Card:

- 1** Turn off the computer.

You may also hot swap a PC Card. Stop the PC Card by clicking the **Safely Remove Hardware** icon on the System tray. After the PC Card is stopped, it is safe to remove.

- 2** Locate the PC Card slot on the left side of the computer.

- 3 Insert the PC Card.

### *Inserting a PC Card*

- 4 When the card is almost all the way into the slot, push firmly, but gently, to ensure a firm connection with the computer. Do not force the card into position.

## Removing a PC Card

Stop the PC Card by clicking the **Safely Remove Hardware** icon on the System tray. After the PC Card is stopped, it is safe to remove.

- 1 Locate the PC Card ejection button.
- 2 Press the PC Card eject button once to extend it, and push it in to remove the PC Card.

*Press the PC card ejection button once to extend it*

The PC Card ejects slightly from the slot.

- 3 Grasp the edges of the PC Card and slide it out of the slot.

## Inserting and removing Wi-Fi® modules

Your system may come with an optional Wi-Fi module. If you wish to insert or remove a Wi-Fi module, contact a Toshiba Wireless Authorized Service Provider.

## Setting up a PC Card for your computer

Some PC Cards are ready to use as soon as you install them. Others, such as hard disk cards, network cards, and SCSI adapters, may need to be set up to work with your computer. To set up your PC Card, refer to the documentation that came with the card or refer to your operating system manual or online help.

## Using SD® cards

Your computer supports the use of SD® memory/input/output cards. The cards can be used with a variety of digital products: digital music players, cellular phones, PDAs, digital cameras, digital video camcorders, etc.

## Inserting an SD® card

To insert an SD® card:

- 1 Turn the card so that the contacts (metal areas) are face down.
- 2 Push the card into the slot until it locks in place.

### *Inserting an SD card*

#### **CAUTION**

Do not touch the SD® connector (metal area). You could expose the storage area to static electricity, which can destroy data.

Do not remove an SD® card while data is being written or read. Even when the message “copying...” in the windows disappears, writing to the card might still be in progress and your data could be destroyed. Wait for the SD Media™ indicator light to go out.

## Removing an SD® card

To remove an SD® card:

- 1** Right-click the **Safely Remove Hardware** icon on the System tray. After the card is stopped, it is safe to remove.
- 2** Press the card inward to release it.  
The card pops out slightly.
- 3** Grasp the card, and pull it straight out.

---

## Using the i.LINK® port

The i.LINK® port on the rear of the computer provides an extremely fast data transfer rate (up to 400 mega bits per second [Mbps]). You can connect up to 63 external devices to the i.LINK® port.

In addition to high speed, the i.LINK® port also supports isochronous data — the delivery of data at a guaranteed rate. This makes it ideal for devices that transfer high levels of data in real-time, such as video devices.

As with USB ports, the i.LINK® port supports both Plug-and-Play (automatic configuration) and hot swapping (the ability to connect and disconnect devices while the computer is on). The main difference between i.LINK® and USB technology is that i.LINK® supports faster data transfer rates.

## Connecting your modem to a telephone line

Your computer comes with a built-in modem that can be connected to a standard voice-grade telephone line.

The modem allows you to:

- ❖ Access the Internet.
- ❖ Communicate with your office's local area network (LAN), or a larger corporate wide area network (WAN).

For specific information about connecting to a LAN or WAN, consult your network administrator.

- ❖ Send a fax directly from your computer.

For more detailed information regarding your computer's modem, visit Toshiba's web site at [toshiba.com](http://toshiba.com).

---

## Connecting to a phone line

Before you can communicate using the modem, you need to connect it to a telephone line. Your computer's built-in modem port provides an RJ-11 jack, allowing you to connect the modem to a standard voice-grade telephone line.

- 1 Plug one end of the telephone cable into the modem port on the back of the computer.

*Connecting the telephone cable to the modem port*

- 2 Connect the other end to the RJ-11 wall jack.

*Connecting to a wall jack*

---

**CAUTION**

The modem is designed for use with a standard analog telephone line. Do not connect the modem to a digital telephone line. A digital line will damage the modem.

---

Now you're ready to send a fax or use the modem to connect to an online service or the Internet.

For more information on using a modem, see [“Setting up for communications” on page 123](#).

# Chapter 6

## Toshiba Utilities

---

Your computer includes several utilities designed to help you to reconfigure your system to best meet your individual needs. Together, these allow you to determine certain system details, set additional options, or change default options. This chapter describes the utilities supplied by Toshiba:

- ❖ [Fn-esse®](#)
- ❖ [Hotkey utility](#)
- ❖ [TOSHIBA Console](#)
- ❖ [Toshiba Hardware Settings](#)
- ❖ [Power Management](#)
- ❖ [Enabling Hibernation](#)
- ❖ [Setting a user password](#)
- ❖ [Using a supervisor password](#)

## Fn-esse®

Desktop shortcuts and Toshiba's Fn-esse program provide quick ways to open programs, documents, and folders from within any Windows® program without using the Start menu. For more information on creating desktop shortcuts, refer to the operating system documentation that came with your computer.

This section describes how to use the Fn-esse program to quickly access your programs and files.

With Fn-esse, you can assign an Fn key combination to to:

- ❖ Open a Windows® XP operating system program.
- ❖ Open a file in its associated program.
- ❖ Display a customized folder of programs and/or files from which to choose.

Fn-esse also has several keys, known as hot keys, that perform preassigned operations. For more information, see [“Hot Keys” on page 191](#).

You can assign any key that is not associated with a hot key or a keyboard overlay.

## Starting Fn-esse®

- 1 Click **Start**, point to **All Programs**, **Toshiba Utilities**, then click **Fn-esse**.

The Fn-esse keyboard appears.

*Sample Fn-esse window*

---

The keys are color-coded as follows:

- ❖ Available keys are dark gray with white letters.
- ❖ Assigned keys and keys associated with a popup list are shown on the Fn-esse keyboard in the selected color.
- ❖ Unavailable keys are light gray.

There are two ways to assign a key to open a program or document:

- ❖ Using drag-and-drop
- ❖ Using the keyboard or pointing device

The method most often used is drag-and-drop.

## Using drag-and-drop to assign a key

To assign a key to a program or document:

- 1 Start both Fn-esse and Windows® Explorer (or the program supporting drag-and-drop).
- 2 Resize the Explorer window so that you can see both the Fn-esse keyboard and Explorer at the same time.
- 3 In the Explorer window, highlight the program or document file you wish to assign to a key.
- 4 Click and hold the primary button as you drag the highlighted item from Explorer to the key on the Fn-esse keyboard to which you want to assign it.
- 5 Release the primary button.

Fn-esse displays the Add/Edit Command dialog box with the Description, Command Line, and Working Directory fields automatically completed.

- 6 Click **OK** to close the Add/Edit Command dialog box with your key assignment in place.

The program or document is now associated with the key you just selected. To open the program or document, press Fn plus the appropriate key from within any Windows program.

## Using the keyboard or pointing device to assign keys

To assign a key to open a program or document, start Fn-esse and either:

- ❖ Using the keyboard, press and hold the Fn key, then press the desired assignment key.
- ❖ Using the pointing device, move the cursor over the desired key in the Fn-esse window and press the secondary button.

The Assignment Type dialog box appears.

*Sample Fn-esse assignment type dialog box*

## Making a direct key assignment

- 1 Select **Direct...** to display the Add/Edit Command dialog box.
- 2 Enter the Description, Command Line, and Working Directory for the new Fn-esse key assignment, or click **Browse** to specify this information.
- 3 Click **OK**.

---

## Making a popup assignment

- 1 Select **Popup...** to display the Application Explorer dialog box.
- 2 Select the desired folder. The left side of the Application Explorer window displays the folders in the Programs menu. The right side lists the programs and documents in the folder. These are the items that will appear in the popup list.
- 3 To create a popup list with items from various folders, or to pick only a few items from a folder, create a new folder containing only the desired programs and documents. If you are unsure how to do this, refer to your Windows® XP operating system documentation.
- 4 Click **OK** to associate the folder with the key you just selected.

To open a popup list showing the items in that folder, press Fn plus the appropriate key from within any Windows® program.

## Viewing existing key assignments

To view the existing key assignments, choose **Assignments** from the Fn-esse keyboard. Fn-esse displays the Function Key Assignments dialog box. This box lists all the key assignments and the program or document to which each key is assigned.

To view items in a popup list, select the **Expand popup lists** check box.

## Changing or removing existing key assignments

In the Fn-esse keyboard, click the key you wish to change with the secondary button.

Fn-esse displays the Assignment Type dialog box.

- ❖ To change the key assignment, click **Direct...** or **Popup...** and continue as if you were creating a new assignment.
- ❖ To remove the key assignment, click **Clear**.

## TOSHIBA Console

The TOSHIBA Console provides quick access to computer functions and allows you to customize a range of computer settings.

To access the control panel:

- 1 Click **Start**, then click **All Programs**.
- 2 Point to **TOSHIBA Console**, then click the resulting **Toshiba Console** selection (or press the inTouch button).

The TOSHIBA Console window appears.

*Sample TOSHIBA Console window*

---

The TOSHIBA Console offers three categories of features:

- ❖ Customizing Your Computer
- ❖ Network
- ❖ Security

## **Customizing Your Computer**

The features available in this category are:

- ❖ Power Management
- ❖ Mouse
- ❖ Hotkey assignment (for detailed information, see [“Fn-esse®” on page 146](#))
- ❖ Toshiba Hardware Settings
- ❖ Toshiba Button Control
- ❖ ConfigFree

## **Network**

The features in this category are:

- ❖ IR Utility
- ❖ Connectivity Doctor

## **Security**

The features available in this category are:

- ❖ Supervisor password
- ❖ User password

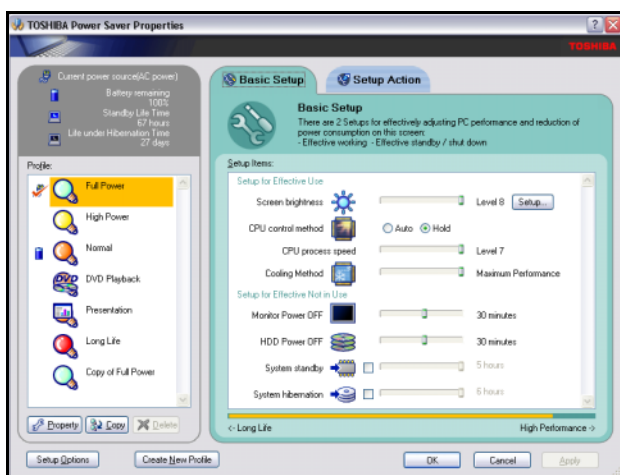

## **Power Management**

The Power Management feature enables you to control your computer’s power usage, regardless of the source, and use the many preset power modes, or create one yourself.

To access Power Management through the TOSHIBA Console, double-click the **Power Management** icon.

The TOSHIBA Power Saver Properties window appears.

*Sample Toshiba Power Saver Properties window*

The Power Properties window shows the power profiles, which are optimized for several different working environments.

You can either use one of the preset modes or create and use your own customized profile. The preset profiles cannot be deleted.

By changing the options that appear in the Toshiba Power Saver Properties window and clicking **OK**, you can reconfigure that function. Any options that you change become effective when you click either **OK** or **Apply**.

## Profiles

This section lists the preset profiles along with the estimated battery life for each mode. The preset profiles are:

- ❖ Full Power

- ❖ High Power
- ❖ Normal
- ❖ DVD Playback
- ❖ Presentation

Although you can change the properties for any of these profiles, this is not recommended. If you need a customized profile, create a new profile with the properties you require.

The DVD Playback profile applies only when a DVD program is playing.

## Quickly creating a new power mode

- 1 Highlight one of the preset profiles.
- 2 Click **Copy**.
- 3 A new mode appears with the title “*Copy of Name*” where *Name* is the title of the mode you copied. You can change the name, description, or icon for this profile by clicking **Property**.

## Customizing a power mode

- 1 Highlight the profile you want to modify.
- 2 Change the settings you want on the **Basic Setup** tab.
- 3 **You may also change settings on the Setup** Action tab. Keep in mind however, that by default, these actions will apply to all profiles.

## Mouse utility

The Mouse utility allows you to change your TouchPad or mouse settings. To access the Mouse utility through the TOSHIBA Console, double-click the **Mouse** icon.

## Hotkey utility

The hotkey utility allows you to receive a confirmation message when you use the hotkey combination for Standby [Fn+F3] and Hibernation [Fn+F4].

To activate:

- 1 Click **Start, All Programs, Toshiba, Utilities**, then click the Hotkey utility.

The Hotkey window appears.

*Sample Toshiba Hotkey utility window*

- 2 Select the desired option.
- 3 Click **OK**.

## Toshiba Hardware Settings

Toshiba Hardware Setup is the Toshiba configuration management tool available through Windows. To access it, open the **Start** menu, click **Control Panel**, then **Printers and Other Hardware**. Then click the **Toshiba HWSetup** icon.

*Sample TOSHIBA HWSetup window*

The tabs represent various dialog boxes. They are:

- ❖ General—Allows you to view current BIOS, hard disk drive and memory settings
- ❖ Parallel/Printer — Allows you to configure the parallel port default settings
- ❖ Display — Allows you to change various default settings for the built-in LCD display
- ❖ CPU — Allows you to change the dynamic CPU frequency mode
- ❖ Boot Priority—Allows you to change the sequence in which your computer searches the drives for the operating system
- ❖ Keyboard — Allows you to configure an external PS/2 keyboard to emulate the Fn function key and access the wake-on keyboard function
- ❖ LAN—Allows you to set networking functions

By changing any of the options that appear in the dialog boxes and clicking **Apply**, you can reconfigure that function.

Any options that you change will become default settings when you restart your system.

## Enabling Hibernation

Your computer includes a Toshiba Power Saver utility that allows you to change many of your default power settings. You can enable hibernation through this utility.

To power down the computer using the Hibernation option, click **Start**, select **Turn off computer**. When you hold down the **Shift** key, the Standby button changes to Hibernate. Hold down the **Shift** key, then select **Hibernate**.

The computer saves the state of the system, including all open programs and files, to the hard disk, and then powers down completely.

**TECHNICAL NOTE:** Toshiba recommends that you always have the Hibernation option enabled. Hibernation is the function that causes your system to save anything you have in short-term memory to the hard disk drive should your battery fail. If Hibernation is not enabled and your battery dies, you will lose data.

---

## Setting user passwords

Setting a password leaves your computer secure so that nobody can access your files. You must enter the password before you can work on your computer.

Toshiba supports the several types of passwords on your computer:

- ❖ An instant password — Secures your open programs and files when leaving the computer temporarily
- ❖ A power-on password — Prevents unauthorized users from starting or restarting the computer

- ❖ A supervisor password — Prohibits unauthorized users from accessing certain functions such as Toshiba Hardware Setup. This is useful if more than one person uses the computer.

A single user password supports the instant and power-on password functions.

When setting up the various passwords, keep the following in mind:

- ❖ The user password can be set up under the supervisor password.
- ❖ The supervisor password must be set before the user password, or the user password must be deleted and then re-entered after the supervisor password is set.

TECHNICAL NOTE: When you delete the supervisor password, the user password is also deleted.

## Using an instant password

An instant password secures your system with a single keystroke. Use this feature when you leave your desk for a few minutes and do not want to turn off the computer.

To use an instant password, press **Fn**, then press **F1**. This freezes the keyboard and TouchPad, and blanks the screen. An instant password has no effect on an optional USB mouse or trackball.

To unlock your system, press **Enter** and the Windows Logon screen will appear. Select your user name and enter your password, if any.

## Setting a user password

To register a password for the power-on password functions:

- 1 Click **Start**, then click **All Programs**.

- 2 Point to **TOSHIBA Console**, then click the resulting **TOSHIBA Console** selection. You may also press the TOSHIBA Console button to the left of the keyboard to open the TOSHIBA Console.

The TOSHIBA Console window appears.

- 3 On the left side, select **Security**.
- 4 Select the **User Password** icon.
- 5 Click **Set**.
- 6 Type your password in the **Input** box.
- 7 Retype your password in the **Input** again box.
- 8 Click **Set**.
- 9 Click **OK**.

## Disabling a user password

To cancel the power-on password function:

- 1 Click **Start**, then click **All Programs**.
- 2 Point to **TOSHIBA Console**, then click the resulting **TOSHIBA Console** selection. You may also press the TOSHIBA Console button to the left of the keyboard to open the TOSHIBA Console.

The TOSHIBA Console window appears.

- 3 On the left side, select **Security**.
- 4 Select the **User Password** icon.
- 5 Select **Verify by Password**.
- 6 Type the correct password.
- 7 Click **Delete**.
- 8 Click **OK**.

## Using a supervisor password

A supervisor password prevents other users from changing hardware configuration options.

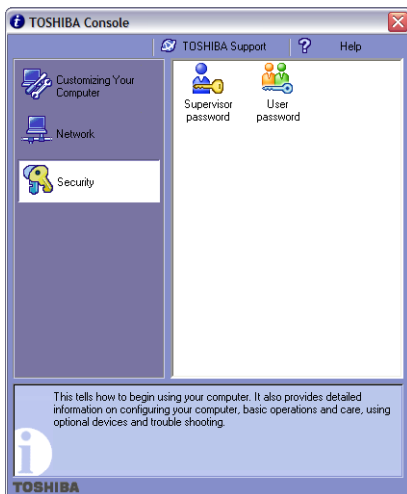

### Setting a supervisor password

To register a password for the power-on password functions:

- 1 Click **Start**, then click **All Programs**.
- 2 Point to **TOSHIBA Console**, then click the resulting **TOSHIBA Console** selection. You may also press the TOSHIBA Console button to the left of the keyboard to open the TOSHIBA Console.

The TOSHIBA Console window appears.

- 3 On the left side, select **Security**.

*Sample TOSHIBA Console Security window*

- 4 Select the **Supervisor Password** icon.
- 5 Click **Set**.

- 6 Type your password in the **Input** box.
- 7 Retype your password in the **Input** again box.
- 8 Click **Set**.
- 9 Click **OK**.

## Deleting a supervisor password

To cancel the power-on password function:

- 1 Click **Start**, then click **All Programs**.
- 2 Point to **TOSHIBA Console**, then click the resulting **TOSHIBA Console** selection. You may also press the TOSHIBA Console button to the left of the keyboard to open the TOSHIBA Console.

The TOSHIBA Console window appears.

- 3 On the left side, select **Security**.
- 4 Select the **Supervisor Password** icon.
- 5 Select **Verify by Password**.
- 6 Select the **Supervisor Password** tab.
- 7 Type the correct password.
- 8 Click **Verify**.
- 9 Click **Delete**.
- 10 Select **Verify by Password**.
- 11 Type the correct password.
- 12 Click **Verify**.

# Chapter 7

## If Something Goes Wrong

---

Some problems you may encounter when using your notebook computer are relatively easy to identify and solve. Others may require help from your dealer or the manufacturer of a software program.

This chapter aims to help you solve many problems by yourself. It covers the problems you are most likely to encounter. If all else fails, contact Toshiba. You will find information on Toshiba's support services at the end of this chapter.

### Problems that are easy to fix

#### **Your program stops responding.**

If you are working with a program that suddenly freezes all operations, chances are the program has stopped responding. You can exit the failed program without shutting down the operating system or closing other programs.

To close a program that has stopped responding:

- 1** Press Ctrl, Alt, and Del simultaneously (once).

The Windows Task Manager window appears.

- 2 Click the **Applications** tab.

If a program has stopped responding, the words “not responding” appear beside its name in the list.

- 3 Select the program you want to close, then click **End Task**.

Closing the failed program should allow you to continue working. If it does not, continue with step 3.

- 4 Close the remaining programs one by one by selecting the program name, then **End Task**.

- 5 Click **Start, Turn off computer**.

- 6 The Turn off computer window appears.

- 7 Click **Turn off**.

The computer turns off.

### **Your program performs an illegal operation.**

If you receive the message, “Your program has performed an illegal operation,” you should record the details of the message and consult the software manufacturer.

To record the details:

- 1 Click the **Details** button and select the text the operating system displays.

The Details button displays information that the software manufacturer needs to help you solve your problem.

- 2 Press Ctrl and c simultaneously to copy the text to the clipboard.

- 3 Open Notepad (click **Start**, point to **All Programs**, then point to **Accessories** and click **Notepad**).

- 4 Press Ctrl and v simultaneously to paste the details into Notepad.

- 5 Add a paragraph break and type some notes describing what you were doing when you received the message.

- 
- 6** Save the file and refer to it when you contact the software manufacturer.

## Problems when you turn on the computer

These problems may occur when you turn on the power.

### **The computer will not start.**

Make sure you attached the AC adapter and power cable properly or installed a charged battery.

Press and hold down the power button for a few seconds.

If you are using the AC adapter, check that the wall outlet is working by plugging in another device, such as a lamp.

### **The computer starts but, when you press a key, nothing happens.**

You are probably in Stand By mode and have a software or resource conflict. When this happens, turning the power on returns you to the problem instead of restarting the system. To clear the condition, press Ctrl, Alt, and Del simultaneously.

Clearing the condition may get the computer running, but it will not solve a resource conflict. Read the documentation that came with the conflicting device and [“Resolving a hardware conflict” on page 167](#).

### **The computer is not accessing the hard disk or the external diskette drive.**

Your computer normally loads the operating system from the hard disk. If you have a hard disk problem, you will not be able to start the computer. Insert a system diskette into the external diskette drive and press F12 when the machine starts, and then use the arrow keys to select the boot-up device.

**The computer displays the WARNING RESUME FAILURE message.**

The computer was placed in Stand By mode and the battery has discharged. Data stored in the computer's memory has been lost.

To charge the battery, leave the computer plugged into a live wall outlet for several hours. For more information, see [“Power and the batteries” on page 171.](#)

**The computer displays the Non-System disk or disk error message.**

Make sure there is no diskette in the diskette drive. If there is one, remove it and press any key to continue. If pressing any key does not work, press Ctrl, Alt, and Del to restart the computer.

## **The Windows® operating system is not working**

Once you are familiar with the desktop and used to the way the operating system responds to your work routine, you can easily detect if the operating system is not working correctly. For example:

- ❖ The operating system fails to start after the Starting Windows XP message appears.
- ❖ The operating system takes a long time to start.
- ❖ The operating system responds differently from the normal routine.
- ❖ The screen does not look right.

Unless a hardware device has failed, problems usually occur when you change the system in some way such as installing a new program or adding a device.

If you experience any of these problems, use the options in the Startup menu to fix the problem.

---

## Using Startup options to fix problems

If the operating system fails to start properly, you may have to change your system's configuration or verify the startup procedure to fix the problem. To do this, use the options in the Startup menu. This section describes each option and when to use the procedure.

To open the Startup menu:

- 1** Restart your computer.
- 2** Press F8 when your computer starts.

The Windows® Advanced Options menu displays these options:

- ❖ Safe Mode
- ❖ Safe Mode (with Networking)
- ❖ Safe Mode (with Command Prompt)
- ❖ Enable Boot Logging
- ❖ Enable VGA Mode
- ❖ Last known good configuration (your most recent settings that worked)
- ❖ Directory Services Restore Mode (Windows® domain controllers only)
- ❖ Debugging Mode
- ❖ Start Windows® normally
- ❖ Reboot
- ❖ Return to OS Choices (menu)

---

See your Windows® documentation for further explanation.

---

**TECHNICAL NOTE:** If your computer is connected to a network, the Startup menu may display different versions of Safe mode.

---

## **Internet problems**

### **My Internet connection is very slow.**

Many factors contribute to the speed with which you can surf the Internet. They include: modem speed, time of day (when everyone else is surfing, your access can be slow) and popularity of the site. If accessing a particular site is very slow, try later.

### **My browser cannot find the URL address I typed in.**

Make sure you separated the domain names of the address with the forward slash (/). Check the spelling of each name and the syntax of the address carefully. A single incorrect letter or missed character, comma instead of period (“dot”) or other mistake makes it impossible for your browser to locate the site.

### **My browser cannot find a site I bookmarked.**

The World Wide Web is constantly changing. A site you bookmarked yesterday may not be available today or its server may be down for temporary repair. Try again later.

## **The Windows® XP operating system can help you**

If the operating system has started properly, but you still have a problem using your computer, the online Help can assist you in troubleshooting the problem.

To access Windows® XP Help and Support:

- 1** Click **Start**, then click **Help and Support**.

---

The Help and Support window appears.

- 2 Then do one or both of the following:
  - ❖ In the search field, type in the topic of the problem with which you need help and follow the on-screen instructions.
  - ❖ Click a problem you would like help with from the listings and follow the on-screen instructions.

You can connect to Support Online by clicking **Support** from the menu.

## Resolving a hardware conflict

If you receive an error message telling you there is a device driver conflict or a general hardware problem, try using Windows® Help and Support to troubleshoot the problem first.

For help on hardware conflicts:

- 1 Click Start, then click **Help and Support**.
- 2 Click the **Hardware** link in the window's left pane.

A list of category links appear.
- 3 Click the **Fixing a hardware problem**.
- 4 Choose from specific topics and follow the steps.

If there is still a problem, the operating system should display a message that explains what the conflict is.

## A plan of action

The smooth operation of the system depends on the interaction of all devices, programs, and features. If the system or one of its attached devices is not working, resolving the problem can be time-consuming and frustrating.

The recommended procedure for getting multiple devices to work together is to add and set up one device at a time. After

you add each device, test it to make sure it and all previously connected devices work.

The device most recently connected to the system is the one most likely to be causing a hardware conflict.

## **Resolving hardware conflicts on your own**

Computer components need resources to accomplish a task. A device, such as a disk drive or a modem, needs a channel to the computer's Central Processing Unit (CPU). It also needs a direct channel to the computer's memory to store information as it works. These channels of communication are commonly referred to as system resources.

### **Interrupt Request Channel**

The channel to the CPU is called an Interrupt Request (IRQ) because it interrupts what the processor is doing and requests some of the processor's time.

### **Direct Memory Access**

Similarly, the data required by the device is stored in a specific place or address in memory called the Direct Memory Access (DMA). The DMA provides a dedicated channel for adapter cards to bypass the microprocessor and access memory directly. If two or more devices use the same DMA, the data required by one device overwrites the data required by the other, causing a hardware conflict.

## **Resolving conflicts**

There are three things you can do to resolve hardware conflicts:

- ❖ Disable the device.

For an older device, remove it from the computer.

- ❖ Disable another system component and use its resources for the new device, see “[Fixing a problem with Device Manager](#)” on page 169.
- ❖ Reconfigure the device so that its requirements do not conflict. Refer to the device’s documentation for instructions about changing settings on the device.

## **Fixing a problem with Device Manager**

Device Manager provides a way to check and change the configuration of a device.

### **CAUTION**

Changing the default settings using Device Manager can cause other conflicts that make one or more devices unusable. Device Manager is a configuration tool for advanced users who understand configuration parameters and the ramifications of changing them.

## **Disabling a device**

- 1** Open the **Start** menu, click **Control Panel** then **Performance and Maintenance**.
- 2** Click the **Administrative Tools** icon.
- 3** Click the **Computer Management** and then **Device Manager**.
- 4** Select the specific device from the device category.
- 5** In the toolbar, look to the far right for an icon of a monitor with a strike mark through a circle on the front. This is the disable feature.
- 6** Click the icon.  
You are given the option of disabling the device.
- 7** Click **yes** or **no**, whichever is appropriate.

## Checking device properties

Device Manager provides a way to view the properties of a device. Properties include the name of the manufacturer, the type of device, the drivers installed, and the system resources assigned to the device.

To check a device's properties:

- 1** Open the **Start** menu, click **Control Panel**.
- 2** Click **Performance and Maintenance**, and then **Administrative Tools**.
- 3** Click the **Computer Management** icon.
- 4** Click the **Device Manager** button.
- 5** To view the device(s) installed, double-click the device type.
- 6** To view the properties, double-click the device.

The operating system displays the Device Properties dialog box, which provides an array of tabs. They include:

- ❖ The **General** tab, which provides basic information about the device.
- ❖ The **Resource** tab, which lists resources assigned to the monitor, DVD-ROM, multi-function drive, diskette disk drive, and other power-using functions.
- ❖ The **Drivers** tab, which displays the drivers being used by the device.

A Troubleshooting button is also present.

Click **troubleshooting**.

A Help and Support window for that device appears.

For more information about Device Manager, refer to Windows® XP online help.

---

## Memory problems

Incorrectly connected or faulty memory modules may cause errors that seem to be device-related. It is worthwhile checking for these first:

- 1 Click **Start**, then click **Turn off computer**.
- 2 Click **Turn Off**.  
The operating system shuts down and turns off the computer automatically.
- 3 Remove the memory module.
- 4 Reinstall the memory module, following the instructions in [“Adding memory” on page 46](#), and making sure it is seated properly.
- 5 Check for the error again.
- 6 If the error recurs, remove the memory module entirely and check for the error again.

If removing the memory module eliminates the error, the memory module may be faulty. If the error recurs without the memory module installed, the error is not caused by the memory module.

TECHICAL NOTE: You must have a least one memory module installed for the computer to work.

---

## Power and the batteries

Your computer receives its power through the AC adapter and power cable or from the system batteries (main battery and real-time clock (RTC) battery). Power problems are interrelated. For example, a faulty AC adapter or power cable will neither power the computer nor recharge the batteries.

Here are some typical problems and how to solve them:

**The AC power light does not come on when you plug in the AC adapter and power cable.**

Make sure the AC adapter and power cable are firmly plugged into both the wall outlet and the computer.

If the AC power light still does not come on, check that the wall outlet is working properly by plugging in a lamp or other appliance.

**The AC adapter and power cable work correctly, but the battery will not charge.**

The battery does not charge while the computer is consuming full power. Try turning off the computer.

The main battery may not be inserted correctly in the computer. Turn off the computer, remove the battery, clean the contacts with a soft dry cloth (if necessary) and replace the battery.

The battery may be too hot or too cold to charge properly. If you think this is the probable cause, let the battery reach room temperature and try again.

If the battery has completely discharged, it will not begin charging immediately. Leave the AC adapter and power cable connected, wait 20 minutes and see if the battery is charging.

If the battery light is glowing after 20 minutes, let the computer continue charging the battery for at least another 20 minutes before you turn on the computer.

If the battery light does not glow after 20 minutes, the battery may have reached the end of its useful life. Try replacing it.

**The battery appears not to power the computer for as long as it usually does.**

If you frequently recharge a partially charged battery, it may not charge fully. Let the battery discharge completely, then try charging it again.

Check the power options using the Power Management utility. Have you added a device, such as a PC Card or

memory module, that takes its power from the battery? Is your software using the hard disk more? Is the display power set to turn off automatically? Was the battery fully charged to begin with? All these conditions affect how long the charge lasts.

## **Keyboard problems**

If, when you type, strange things happen or nothing happens, the problem may be related to the keyboard itself.

### **The keyboard produces unexpected characters.**

A keypad overlay may be on. If the numeric keypad or cursor control light is on, press Fn and F10 simultaneously to turn off the cursor control light or press Fn and F11 simultaneously to turn off the numeric keypad light.

If the problem occurs when both the keypad overlays are off, make sure the software you are using is not remapping the keyboard. Refer to the software's documentation and check that the program does not assign different meanings to any of the keys.

### **You have connected an external keyboard and the operating system displays one or more keyboard error messages.**

If you have a second keyboard, try it. If it works, the first keyboard may be defective or incompatible with your computer.

## **Display problems**

Here are some typical display problems and their solutions:

### **The display is blank.**

Display Auto Off may have gone into effect. Press any key to activate the screen.

You may have activated the instant password feature by pressing Fn and F1 simultaneously. If you have registered a

password, press the Enter key, type the password and press Enter. If no password is registered, press Enter. The screen reactivates and allows you to continue working.

If you are using the built-in screen, make sure the display priority is not set for an external monitor. To do this, hold the Fn key and press F5 twice. A window with display choices pops up. Hold the Fn key and press F5 twice again to advance through the display options.

If you are using an external monitor:

- ❖ Check that the monitor is turned on.
- ❖ Check that the monitor's power cable is firmly plugged into a working power outlet.
- ❖ Check that the cable connecting the external monitor to the computer is firmly attached.
- ❖ Try adjusting the contrast and brightness controls on the external monitor.
- ❖ Press Fn and F5 simultaneously to make sure the display priority is not set for the built-in screen.

### **The screen does not look right.**

You can change the display settings by clicking a blank area of the desktop with the secondary control button, then clicking Properties. This opens the Display Properties dialog box. The Appearance tab of this dialog box allows you to choose the colors for the screen. The Settings tab allows you to choose the screen resolution.

### **The built-in screen flickers.**

Some flickering is a normal result of the way the screen produces colors. To reduce the amount of flickering, try using fewer colors.

To change the number of colors displayed:

- 1** Point at the desktop and click with the secondary button.
- 2** Click **Properties**, and then the **Settings** tab.

- 3 Change the Colors option and click **OK**.

For more information, see Windows® Help.

**A message tells you that there is a problem with your display settings and that the adapter type is incorrect or the current settings do not work with your hardware.**

Reduce the size of the color palette to one that is supported by the computer's internal display.

To change the display properties:

- 1 Point at the desktop and click with the secondary button.  
The Display Properties window appears.
- 2 Click **Properties**, then click the **Settings** tab.
- 3 Adjust the screen resolution and/or color quality.
- 4 Click **OK**.

**The display mode is set to Simultaneous and the external display device does not work.**

Make sure the external monitor is capable of displaying at resolutions of 800 x 600 or higher. Devices that do not support this resolution will only work in Internal/External mode.

**Small bright dots appear on your TFT display when you turn on your computer.**

Your display contains an extremely large number of thin-film transistors (TFT) and is manufactured using high-precision technology. The small bright dots that appear on your display are an intrinsic characteristic of the TFT manufacturing technology.

## **Disk drive problems**

Problems with the hard disk or with a diskette drive usually show up as an inability to access the disk or as sector errors.

Sometimes a disk problem may cause one or more files to appear to have garbage in them. Typical disk problems are:

**You are having trouble accessing a disk, or one or more files appear to be missing.**

Make sure you are identifying the drive by its correct name (A: or C:).

## Error-checking

Run Error-checking, which analyzes the directories, files and File Allocation Table (FAT) on the disk and repairs any damage it finds:

To run Error-checking:

- 1 Click **Start**, then click **My Computer**.
- 2 Right-click the drive you want to check and select **Properties** from the menu.

The drive's properties box appears.

- 3 Click the **Tools** tab.
- 4 Click the **Check now** button.

The Check Disk All Apps box appears.

- 5 You can choose one or both options:
  - ❖ Automatically fix file system errors
  - ❖ Scan for and attempt recovery of bad sectors

- 6 Click **Start**.

Error-checking runs the test.

## Your hard disk seems very slow.

If you have been using your computer for some time, your files may have become fragmented. Run Disk Defragmenter. To do this, click **Start**, then click **All Programs**, point to **Accessories** and **System Tools**, and click **Disk Defragmenter**.

---

**Your data files are damaged or corrupted.**

Refer to your software documentation for file recovery procedures. Many software packages automatically create backup files.

You may also be able to recover lost data using utility software, which is available from your dealer.

**Some programs run correctly but others do not.**

This is probably a configuration problem. If a program does not run properly, refer to its documentation and check that the hardware configuration meets its needs.

**A diskette will not go into the external diskette drive.**

You may already have a diskette in the drive. Make sure the drive is empty.

You may be inserting the diskette incorrectly. Hold the diskette with the hub side facing down, and insert it so that the metal head window cover goes into the drive first.

The metal cover or a loose label may be obstructing the path into the drive. Carefully inspect the diskette. If the metal cover is loose, replace the diskette. If the label is loose, replace the label and try inserting the diskette again.

**The computer displays the** Non-system disk or disk error **message.**

If you are starting the computer from a diskette, the diskette in the drive does not have the files necessary to start the computer. Replace it with a bootable diskette.

**The drive cannot read a diskette.**

Try another diskette. If you can access the second diskette, the first diskette (not the drive) is probably causing the problem. Run Error-checking on the faulty diskette (for instructions, see [“Disk drive problems” on page 175](#)).

## **DVD-ROM or multi-function drive problems**

### **You cannot access a disc in the drive.**

Make sure the drive tray has closed properly. Press gently until it clicks into place.

Open the drive tray and remove the disc. Make sure the drive tray is clean. Any dirt or foreign object can interfere with the laser beam.

Examine the disc to see whether it is dirty. If necessary, wipe it with a clean damp cloth dipped in water or a neutral cleaner.

Replace the disc in the tray. Make sure it is lying flat, label side uppermost. Press the disc down until it locks on the spindle. Close the drive tray carefully, making sure it has shut completely.

### **You press the disc eject button, but the drive tray does not slide out.**

Make sure the computer is connected to a power source and turned on. The DVD-ROM or multi-function drive eject mechanism requires power to operate.

To remove a disc without turning on the computer, use a narrow object, such as a straightened paper clip, to press the manual eject button. This button is in the small hole next to the disc eject button on the right side of the computer.

### **Some discs run correctly, but others do not.**

If the problem is with an application CD-ROM, refer to the software's documentation and check that the hardware configuration meets the program's needs.

## **Sound system problems**

### **You do not hear any sound from the computer.**

Adjust the volume control.

---

If you are using external headphones or speakers, check that they are securely connected to your computer.

**The computer emits a loud, high-pitched noise.**

This is feedback between the microphone and the speakers. It occurs in any sound system when input from a microphone is fed to the speakers and the speaker volume is too loud. Adjust the volume control.

Changing the settings for the Record Monitor feature in the Recording Control Utility (default Off), or the Mute feature in the Mixer Utility (default Enabled), may cause feedback. Revert to the default settings.

**PC Card problems**

PC Cards (PCMCIA-compatible) include many types of devices, such as a removable hard disk, additional memory, or a pager.

Most PC Card problems occur during installation and setup of new cards. If you're having trouble getting one or more of these devices to work together, several sections in this chapter may apply.

Resource conflicts can cause problems when using PC Cards. See [“Using PC Cards” on page 86](#) for more information.

**Card Information Structure**

When you insert a PC Card into a slot, the computer attempts to determine the type of card and the resources it requires by reading its Card Information Structure (CIS). Sometimes the CIS contains enough information for you to use the card immediately.

Other cards must be set up before you can use them. Use the Windows® XP PC Card (PCMCIA) Wizard to set up the card. Refer to your Microsoft® documentation for more information, or refer to the documentation that came with the PC Card.

Some card manufacturers use special software called *enablers* to support their cards. Enablers result in nonstandard configurations that can cause problems when installing the PC Card.

If your system does not have built-in drivers for your PC Card and the card did not come with an operating system driver, it may not work under the operating system. Contact the manufacturer of the PC Card for information about using the card under the operating system.

## PC Card checklist

- ❖ Make sure the card is inserted properly into the slot.  
See “Using PC Cards” on page 86 for information about how to insert PC Cards.
- ❖ Make sure all cables are securely connected.
- ❖ Occasionally a defective PC Card slips through quality control. If another PCMCIA-equipped computer is available, try the card in that machine. If the card malfunctions again, it may be defective.

## Resolving PC Card problems

Here are some common problems and their solutions:

**The slots appear to be dead. PC Cards that used to work no longer work.**

Check the PC Card status:

- 1 Click **Start**.
- 2 Click **My Computer** icon with the secondary button, then click **Properties**.

The System Properties dialog box appears.

- 3 Click the **Hardware** tab.
- 4 Click the **Device Manager** button.

- 5** Double-click the **PCMCIA adapter**.
- 6** Double-click the appropriate PC Card.

The operating system displays your PC Card's Properties dialog box, which contains information about your PC Card configuration and status.

### **The computer stops working (hangs) when you insert a PC Card.**

The problem may be caused by an I/O (input/output) conflict between the PCMCIA socket and another device in the system. Use Device Manager to make sure each device has its own I/O base address. See [“Fixing a problem with Device Manager” on page 169](#) for more information.

Since all PC Cards share the same socket, each card is not required to have its own address.

### **Hot swapping (removing one PC Card and inserting another without turning the computer off) fails.**

Follow this procedure before you remove a PC Card:

- 1** Double-click the **PC Card** icon on the taskbar.
- 2** Click **Safely remove xxxx**, where xxxx is the identifier for your PC Card.

The operating system displays a message that you may safely remove the card.

- 3** Remove the card from the slot.

### **The system does not recognize your PC Card.**

Refer to the PC Card documentation.

Removing a malfunctioning card and reinstalling it can correct many problems.

### **A PC Card error occurs.**

Reinsert the card to make sure it is properly connected.

If the card is attached to an external device, check that the connection is secure.

Refer to the card's documentation, which should contain a troubleshooting section.

## Printer problems

This section lists some of the most common printer problems:

### **The printer will not print.**

Check that the printer is connected to a working power outlet, turned on and ready (online).

Check that the printer has plenty of paper. Some printers will not start printing when there are just two or three sheets of paper left in the tray.

Make sure the printer cable is firmly attached to the computer and the printer.

Run the printer's self-test to check for any problem with the printer itself.

Make sure you installed the proper printer drivers, as shown in ["Setting up your printer" on page 115](#).

You may have connected the printer while the computer is on. Disable Stand By mode, turn off the computer, and turn off the printer. Turn the printer back on, make sure it is on line, then turn the computer back on.

Try printing another file. For example, you could create and attempt to print a short test file using Notepad. If a Notepad file prints correctly, the problem may be in your original file.

If you cannot resolve the problem, contact the printer's manufacturer.

### **The printer will not print what you see on the screen.**

Many programs display information on the screen differently from the way they print it. See if your program has a print preview mode. This mode lets you see your work exactly as it

---

will print. Contact the software manufacturer for more information.

## **Modem problems**

This section lists common modem problems:

### **The modem will not receive or transmit properly.**

Make sure the cable from the modem to the telephone line is firmly connected to the computer's modem port and the telephone line jack.

Check the port settings to make sure the hardware and software are referring to the same COM port.

Check the communications parameters (baud rate, parity, data length and stop bits) specified in the communications program. It should be set up to transmit at 300, 1200, 2400, 4800, 9600, 14400, 28800, 33600 bps (bits per second) or higher. Refer to the program's documentation and the modem manual for information on how to change these settings.

### **The modem is on, set up properly and still will not transmit or receive data.**

Make sure the line has a dial tone. Connect a telephone handset to the line to check this.

The other system may be busy or off line. Try making a test transmission to someone else.

## **Develop good computing habits**

Make sure you are prepared.

### **Save your work frequently.**

You can never predict when your computer will lock, forcing you to close a program and lose unsaved changes. Many software programs build in an automatic backup, but you should not rely solely on this feature. Save your work! See [“Computing tips” on page 67](#) for instructions.

**On a regular basis, back up the information stored on your hard disk.**

Here are some ways you can do this:

- ❖ Copy files to diskette, following the steps in “[Saving your work](#)” on page 76.
- ❖ Connect a tape drive to the system and use specialized software to copy everything on the hard disk to a tape.

Some people use a combination of these methods, backing up all files to tape weekly and copying critical files to diskette on a daily basis.

If you have installed your own programs, you should back up these programs as well as your data files. If something goes wrong that requires you to reformat your hard disk and start again, reloading all your programs and data files from a backup source will save time.

**Read the user’s guides.**

It’s very difficult to provide a fail-safe set of steps you can follow every time you experience a problem with the computer. Your ability to solve problems will improve as you learn about how the computer and its software work together.

Get familiar with all the user’s guides provided with your computer, as well as the manuals that come with the programs and devices you purchase.

Your local computer store or book store sells a variety of self-help books you can use to supplement the information in the manuals.

---

## If you need further assistance

If you have followed the recommendations in this chapter and are still having problems, you may need additional technical assistance. This section contains the steps to take to ask for help.

### Before you call

Since some problems may be related to the operating system or the program you are using, it is important to investigate other sources of assistance first.

Try the following before contacting Toshiba:

- ❖ Review the troubleshooting information in your operating system documentation.
- ❖ If the problem occurs while you are running a program, consult the program's documentation for troubleshooting suggestions. Contact the software company's technical support group for their assistance.
- ❖ Consult the dealer from whom you purchased your computer and/or program. Your dealer is your best source for current information.

Detailed system specifications are available at [www.ts.toshiba.com](http://www.ts.toshiba.com) by selecting your particular product and model number, clicking **GO**, and then clicking the **Detailed Specs** link from the menu on the left, or just refer to the computer documentation shipped with your product.

For the number of a Toshiba dealer near you in the United States, call: (800) 457-7777.

## **Contacting Toshiba**

If you still need help and suspect that the problem is hardware-related, Toshiba offers a variety of resources to help you.

To stay current on the most recent software and hardware options for your computer, and for other product information, be sure to regularly check the Toshiba Web site at [pcsupport.toshiba.com](http://pcsupport.toshiba.com).

### **Toshiba voice contact**

Before calling Toshiba, make sure you have:

- ❖ Your computer's serial number.
- ❖ The computer and any optional devices related to the problem.
- ❖ The Recovery media that came with your system.
- ❖ Name and version of the program involved in the problem along with its installation media.
- ❖ Information about what you were doing when the problem occurred.
- ❖ Exact error messages and when they occurred.

For technical support, call the Toshiba Global Support Centre:

Within the United States at (800) 457-7777

Outside the United States at (949) 859-4273

---

## Other Toshiba Internet Web sites

# Appendix A

## Hot Keys

---

Hot keys are keys that, when pressed in combination with the Fn key, turn system functions on and off. Hot keys have a legend on or above the key indicating the option or feature the key controls.

### Volume Mute

Fn +

This hot key enables/disables volume mute on your computer.

When volume mute is enabled, no sound will come from the speakers or headphones.

## Instant password security

This hot key blanks the display.

When the display re-appears, select your user name and enter the correct password if you have created one.

## Power usage profile

This hot key displays the power usage pop-up window and cycles through the profiles.

The power usage profiles are:

Full Power, High Power, Normal, DVD Playback, Presentation, and Long Life.

### *Sample power usage modes*

The properties of each mode are set in the Toshiba Power Management utility. For more information, see [“Mobile Computing”](#) on page 99.

## Stand By mode

This hot key puts the computer into Stand By mode.

A message box is displayed by default to confirm that the computer is going into Stand By mode. This message box can be set so it does not display.

*Sample Stand By confirmation box*

For more information about Stand By mode, please see [“Using Standby” on page 96.](#)

---

## Hibernation mode

This hot key puts the computer into Hibernation mode.

If Hibernation mode is enabled (the default) a message box is displayed by default to confirm the computer is going into Hibernation mode. The message box can be set so it does not display.

*Sample Hibernation confirmation box*

If Hibernation mode is disabled, this hot key will not respond. For more information on Hibernation mode, see [“Enabling Hibernation” on page 156](#).

## Display modes

This hot key cycles through the power-on display options.

The display modes are:

- ❖ Built-in display panel only
- ❖ Built-in display panel and external monitor simultaneously
- ❖ External monitor only
- ❖ Built-in display panel and external video device simultaneously
- ❖ External video device only

*Sample display options window*

In order to use a simultaneous mode, you must set the resolution of the internal display panel to match the resolution of the external display device.

## Display brightness

This hot key decreases the screen brightness.

This hot key increases the screen brightness.

## Disabling or enabling the TouchPad

This hot key enables/disables the TouchPad.

To use the TouchPad, see “[Disabling or enabling the TouchPad](#)” on page 55.

*Sample disable and enable TouchPad windows*

## Keyboard hot keys

This hot key turns the cursor control overlay on and off.

This hot key turns the numeric overlay on and off.

This hot key turns the scroll lock feature on and off.

# Appendix B

## Power Cable Connectors

The computer features a universal power supply you can use worldwide. This appendix shows the shapes of the typical AC power cable connectors for various parts of the world.

### USA and Canada

*UL approved*  
*CSA approved*

### United Kingdom

*BS approved*

### Australia

*AS approved*

### Europe

*VDA approved*  
*NEMKO approved*

# Appendix C

## Using ConfigFree™ with your Toshiba Computer

---

ConfigFree™ is a set of utilities used for configuring networks that use both wired and wireless network devices. These utilities include the following:

- ❖ **Connectivity Doctor** — The Connectivity Doctor utility is used to help fix networking problems with your notebook computer. For more information, see [“Connectivity Doctor” on page 201](#).
- ❖ **Device Settings** — The Device Settings utility is used to enable and disable any of the wired, wireless, and infrared (for systems with infrared) network devices. You can also change the device properties of your wired and wireless local area network (LAN), and specify settings to automatically switch between wired and wireless LAN. For more information, see [“Device Settings” on page 202](#).
- ❖ **Profile Settings** — The Profiles utility is used to enable a faster and more efficient network configuration. Multiple profiles can be created for various network configurations. For more information, see [“Profile Settings” on page 204](#).

- ❖ **Quick Connect** — The Quick Connect utility is used to configure a wireless LAN connection (ad hoc connection) between a personal computer and a Toshiba Wireless Projector. The Toshiba Wireless Projector utility must be installed in order to enable Quick Connect. For more information, see [“Quick Connect” on page 205](#)

## Getting Started

This section contains information about the ConfigFree main screen, and how to start and configure ConfigFree.

### ConfigFree Main Screen

*ConfigFree main screen*

- ❖ **Stay on the task tray** — Select this check box to display the ConfigFree icon in the taskbar.
- ❖ **Options** — Use to configure options in ConfigFree. For more information, see [“Configuring ConfigFree” on page 200](#).

- ❖ **Create LOG** — Creates and displays a log file containing diagnostic information about devices connected to the network.
- ❖ **About** — Displays version information about ConfigFree.
- ❖ **Help** — Displays the online help file.

## Starting ConfigFree

To start ConfigFree, do any of the following:

- ❖ (Microsoft® Windows® XP users) Click the **Start** button, and then point to **All Programs**. Point to the **TOSHIBA ConfigFree** folder, and then click **ConfigFree**.
- ❖ (Microsoft® Windows® 2000 users) Click the **Start** button, and then point to **Programs**. Point to the **TOSHIBA ConfigFree** folder, and then click **ConfigFree**.
- ❖ Double-click the **ConfigFree** icon  on the taskbar.
- ❖ Click the **ConfigFree** icon  on the taskbar, and then click the desired utility.
- ❖ Press the **Toshiba Console** button (if applicable to your system) to open the Toshiba Console, and then click the **ConfigFree** icon.

## Configuring ConfigFree

The ConfigFree Option dialog box is used to specify various options, such as whether certain warning messages should display and what information should be captured when creating a profile. You can also enable and disable sounds from this dialog box.

To access the ConfigFree Option dialog box, do one of the following:

- ❖ Open ConfigFree, and then click **Options**.

- 
- ❖ Right-click the **ConfigFree** icon on the taskbar, and then click **Options**.

For more information on configuring ConfigFree, see the online help.

## ConfigFree Utilities

### Connectivity Doctor

The Connectivity Doctor displays the connection configuration and the status of all wired and wireless LAN devices that are connected to the network. For wireless network devices, the signal strength and WEP (Wired Equivalent Privacy) key settings (if applicable) also display.

---

**NOTE**

Infrared (for systems with infrared) and dial-up devices are not tested by the Connectivity Doctor.

---

If a problem, or potential problem, is detected, an exclamation point displays in the Connectivity Doctor screen at the relevant location. You can then view a possible cause and solution for the problem by clicking on the exclamation point.

For example, if the connection to a wireless network cannot be established because the wireless communication switch is turned off, an exclamation point displays next to the wireless communication switch. Upon clicking the exclamation point, a description of the problem and a solution displays.

# 202 Using ConfigFree™ with your Toshiba Computer

## ConfigFree Utilities

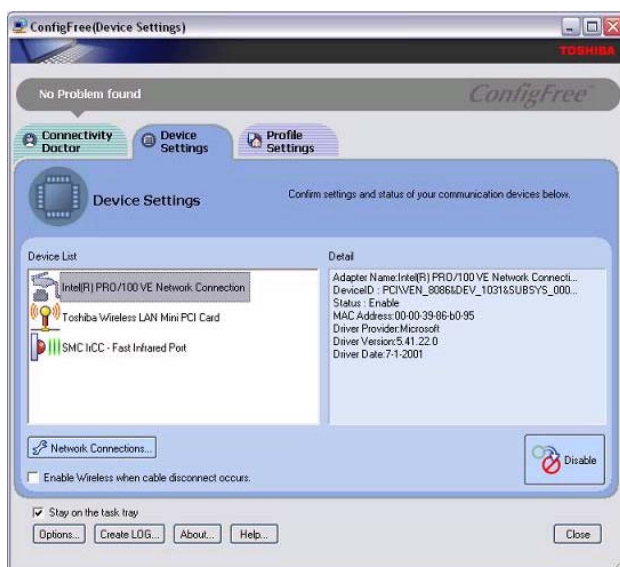

### *The Connectivity Doctor*

The Connectivity Doctor screen automatically refreshes. However, you can also use the **Refresh** button to refresh the screen.

## Device Settings

The Device Settings screen displays a list of all wired, wireless, and infrared (for systems with infrared) devices that are connected to the network. Detailed information about each device, such as the driver version number and the status, are also displayed.

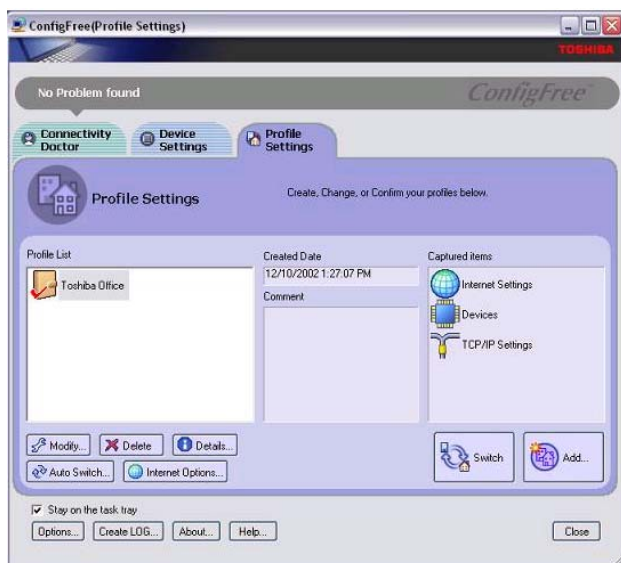

### Viewing the device settings

- ❖ **Network Connections** — Displays the Network Connection window, which contains detailed information about the network connection.
- ❖ **Enable/Disable** — You can easily enable or disable any of the listed devices simply by selecting the desired device, and then clicking the **Enable/Disable** button. Each time a device is enabled or disabled, the status of the device will change.
- ❖ **Enable Wireless when cable disconnect occurs** — Select this check box to enable the Auto Switch feature. For more information, see [“Using Auto Switch” on page 206](#).

## Profile Settings

The Profile Settings utility displays a list of all the registered profiles in ConfigFree. You can also add, modify, and delete profiles; switch the profile being used; and view specific details about each profile.

### Viewing registered profiles

- ❖ **Details** — The **Details** button displays the ConfigFree Details screen. This screen displays detailed information for each profile and can be used to view the various settings for each registered profile.
- ❖ **Auto Switch** — The **Auto Switch** button accesses the Auto Switch feature. For more information, see [“Using Auto Switch” on page 206](#).
- ❖ **Internet Options** — The **Internet Options** button opens the Microsoft® Windows® Internet Options dialog box. See your Microsoft® Windows® documentation for more information.

---

## Add, Modify, and Delete a Profile

- ❖ To add a new profile to ConfigFree, click the **Add** button in the Profile Settings screen. To overwrite an existing profile, select the profile to be overwritten, and then click **Add**.
- ❖ To modify an existing profile, select the profile you want to modify, and then click **Modify**.
- ❖ To delete an existing profile, select the profile to be deleted, and then click **Delete**. A message box displays confirming that you want to delete the profile.

## Switch Profiles

To switch the profile that is being used, select the profile you want to switch to, and then click **Switch**.

## Quick Connect

The Quick Connect feature switches the Wireless LAN connection to connect to the Toshiba Wireless Projector.

As a result, you will not be able to use the network to connect to a Toshiba Wireless Projector when the wireless LAN Configuration is set to Ad hoc. If you are connected to an access point, the connection will be broken and later re-established.

If the Toshiba Wireless Projector setting has been changed from the default, change the connection setting by using Quick Connect-Setup menu.

---

### NOTE

The connection will be made in Ad hoc mode, therefore, if the setting on the Toshiba Wireless Projector is in Infrastructure mode, it will not connect.

---

If the wireless mode for the wireless setting is set for 5GHz (802.11a), Quick Connect will change this mode to 2.4GHz (802.11b), and then connect to the projector.

The wireless LAN configuration will return to the default settings under the following conditions:

- ❖ If the Toshiba Wireless Projector utility is closed.
- ❖ If you select Toshiba Wireless Projector (DPJ) from the ConfigFree tray menu (this will disconnect the wireless LAN connection).
- ❖ If you select a profile from the ConfigFree tray menu or when you disable a wireless device.
- ❖ If you close ConfigFree.

## Using Auto Switch

The Auto Switch feature contains options for automatically switching network devices and profiles if a network connection should fail.

- ❖ **Auto Switch (Cable Disconnect)** — This option automatically switches network devices if a wired network cable is disconnected. For more information, see [“Auto Switch \(Cable Disconnect\)” on page 207](#).
- ❖ **Auto Switch (SSID)** — If your notebook computer is connected to a wireless LAN network, ConfigFree automatically switches profiles if a network failure occurs. For more information, see [“Auto Switch \(SSID\)” on page 207](#).

A message displays each time the Auto Switch feature is applied. You then have the option of disabling the Auto Switch option for future use.

You can access the Auto Switch feature in any of the following ways:

- ❖ From the taskbar, right-click the Config Free icon, and then click Auto Switch.

- 
- ❖ From the Profile Settings screen, you can click the **Auto Switch** button.

## Auto Switch (Cable Disconnect)

If a wired network cable is disconnected from the network, the Auto Switch (Cable Disconnect) option will automatically switch to another network device.

- ❖ **Enable Wireless when cable disconnect occurs** — If your notebook computer is connected to multiple wired LAN devices, and the physical connection to all of these devices is disconnected, ConfigFree switches to a wireless LAN device.

However, if the cable connection to only one wired LAN device is disconnected, ConfigFree will not switch to a wireless device.

## Auto Switch (SSID)

The Auto Switch (SSID) option automatically switches to a different profile if your notebook computer is connected to a wireless LAN network and a network failure occurs.

ConfigFree detects the Service Set Identifier (SSID) of the wireless network that you are connected to. If the SSID matches the Wireless Network SSID specified in Auto Switch, the ConfigFree switches to the corresponding profile.

---

### NOTE

If your notebook computer is connected to multiple wireless LAN devices, the Auto Switch (SSID) feature is disabled. To enable this feature, only one wireless LAN device can be used.

---

# Glossary

---

TECHNICAL NOTE: Some features defined in this glossary may not be available on your computer.

---

## Acronyms

These acronyms may appear in this user's guide.

|               |   |
|---------------|---|
| <b>AC</b>     | alternating current                     |
| <b>BIOS</b>   | basic input/output system               |

## Terms

These terms may appear in this user's guide.

### A

**active-matrix display** — A liquid crystal display (LCD) made from an array of liquid crystal cells using active-matrix technology. Also known as a “TFT display,” in its simplest form there is one thin film transistor (TFT) for each cell. This type of display works well with notebook computers because of its shallow depth and high-quality color. Active-matrix displays are viewable from wider angles than most passive-matrix displays.

**adapter** — A device that provides a compatible connection between two units. For example, the computer's internal display adapter receives information from the software and translates it into images on the screen. An adapter can take a number of forms, from a microprocessor to a simple connector. An intelligent adapter (one that is capable of doing some processing) may also be called a controller.

**alternating current (AC)** — The type of power usually supplied to residential and commercial wall outlets. AC reverses its direction at regular intervals. Compare *direct current (DC)*.

**application** — A computer program that you use to perform tasks of a specific type. Applications include word processors, spreadsheets, and database management systems. See also *program*.

## B

**backup** — A copy of a file, usually on a removable disk, kept in case the original file is lost or damaged.

**basic input/output system (BIOS)** — See *BIOS*.

**baud rate** — The speed at which a communication device, such as a printer or modem, transmits information. Baud rate is the number of signal changes per second (not necessarily the same as bits per second). See also *bits per second*.

**BIOS (basic input/output system)** — Basic instructions, stored in read-only memory (ROM), containing the information the computer needs in order to check hardware and load the operating system when you start up the computer.

**bit** — Short for “binary digit.” A bit is the smallest unit of information used by a computer. A group of eight bits is a byte. See also *byte*.

**bits per second (bps)** — A way of measuring the speed at which information is passed between two devices. The basic measure used in modem communications, bps is similar, but not identical, to the baud rate. See also *baud rate*.

**boot** — To start the computer. The term “boot” originates from bootstrap program (as in “pulling itself up by its bootstraps”), a program that loads and initializes the operating system. See also *reboot*.

**boot disk** — See *system disk*.

**boot priority (startup sequence)** — The order in which the computer accesses its disk drives to locate the startup files. Under the default startup sequence, the computer looks for the startup files in the diskette drive before checking the hard disk.

**bus** — An electrical circuit that connects the central processing unit (CPU) with other parts of the computer, such as the video adapter, disk drives, and ports. It is the pathway through which data flows from one device to another. See also *bus speed*, *frontside bus*.

**bus speed** — The speed at which the central processing unit (CPU) communicates with the other parts of the computer.

**byte** — A sequence of eight bits. A byte is the smallest addressable unit of data. See also *bit*, *gigabyte*, *kilobyte*, *megabyte*.

## C

**cache** — A section of very fast memory in which frequently used information is duplicated for quick access. Accessing data from cache is faster than accessing it from the computer's main memory. See also *CPU cache*, *L1 cache*, *L2 cache*.

**CD** — An individual compact disc. See also *CD-ROM*.

**CD-ROM (compact disc read-only memory)** — A form of high-capacity storage that uses laser optics instead of magnetic means for reading data. See also *CD*. Compare *DVD-ROM*.

**central processing unit (CPU)** — The chip that functions as the “brain” of the computer. It takes information from outside sources, such as memory or keyboard input, processes the information, and sends the results to another device that uses the information.

**character** — Any letter, number, or symbol you can use on the computer. Some characters are non-printing characters, such as a paragraph break in a word-processing program. A character occupies one byte of computer storage.

**chip** — A small piece of silicon containing computer logic and circuits for processing, memory, input/output, and/or control functions. Chips are mounted on printed circuit boards.

**click** — To press and release the AccuPoint control button or mouse button without moving the AccuPoint or mouse. In Windows<sup>®</sup>, this refers to the left mouse button or primary AccuPoint control button, unless otherwise stated. See also *double-click*.

**color palette** — A set of specified colors that establishes the colors that can be displayed on the screen at a particular time.

**compatibility** — The extent to which computers, programs, or devices can work together harmoniously, using the same commands, formats, or language as another.

**configuration** — (1) The collection of components that make up a single computer system. (2) How parts of the system are set up (that is, configured).

**controller** — A device that controls the transfer of data from a computer to a peripheral device and vice versa. For example, disk drives, monitors, keyboards, and printers all require controllers.

**CPU** — See *central processing unit (CPU)*.

**CPU cache** — A section of very fast memory residing between the CPU and the computer's main memory that temporarily stores data and instructions the CPU will need to execute commands and programs. See also *cache*, *L1 cache*, *L2 cache*.

**cursor** — A symbol that indicates the current position on the screen. The shape of the cursor varies, depending on the program you're using and what you're doing.

## D

**default** — The setting selected by a program when the user does not specify an alternative setting.

**device** — A component attached to the computer. Devices may be external (outside the computer's case) or internal (inside the computer's case). Printers, disk drives, and modems are examples of devices.

**device driver** — A program (called a "driver") that permits a computer to communicate with a device.

**dialog box** — An on-screen window displayed by the operating system or a program giving a direction or requesting input from the user.

**direct current (DC)** — The type of power usually supplied by batteries. DC flows in one direction. Compare *alternating current (AC)*.

**direct memory access (DMA)** — A dedicated channel, bypassing the CPU, that enables direct data transfer between memory and a device.

**directory** — See *folder*.

**disable** — To turn a computer option off. See also *enable*.

**disc** — A round, flat piece of metal, designed to be read from and written to by optical (laser) technology, and used in the production of optical discs, such as CDs and DVDs. Compare *disk*.

**disk** — A round, flat piece of material that can be magnetically influenced to hold information in digital form, and used in the production of magnetic disks, such as diskettes and hard disks. Compare *disc*. See also *diskette*, *hard disk*.

**disk drive** — The device that reads and writes information and programs on a diskette or hard disk. It rotates the disk at high speed past one or more read/write heads.

**diskette** — A thin, flexible disk in a protective jacket that stores magnetically encoded data. Diskettes can be removed from the computer and come in two sizes: 5.25-inch and 3.5-inch. Your computer uses 3.5-inch diskettes. See also *double-density diskette*, *high-density diskette*.

**document** — Any file created with an application and, if saved to disk, given a name by which it can be retrieved. See also *file*.

**double-click** — To press the AccuPoint control button or mouse button rapidly twice without moving the AccuPoint or mouse. In the Windows<sup>®</sup> operating system, this refers to the primary AccuPoint control button or left mouse button, unless otherwise stated.

**double-density diskette** — A 3.5-inch diskette that can hold up to 720 KB of information (half the capacity of a high-density diskette). See also *diskette*, *high-density diskette*.

**download** — (1) In communications, to receive a file from another computer through a modem or network. (2) To send font data from the computer to a printer. See also *upload*.

**drag** — To hold down the AccuPoint control button or mouse button while moving the cursor to drag a selected object. In the Windows<sup>®</sup> operating system, this refers to the primary AccuPoint control button or left mouse button, unless otherwise stated.

**driver** — See *device driver*.

---

**DVD** — An individual digital versatile (or video) disc. See also *DVD-ROM*.

**DVD-ROM (digital versatile [or video] disc read-only memory)** — A very high-capacity storage medium that uses laser optics for reading data. Each DVD-ROM can hold as much data as several CD-ROMs. Compare *CD-ROM*.

## E

**emulation** — A technique in which a device or program imitates another device or program.

**enable** — To turn on a computer option. See also *disable*.

**executable file** — A computer program that is ready to run. Application programs and batch files are examples of executable files. Names of executable files usually end with a .bat or .exe extension.

**expansion device** — A device that connects to a computer to expand its capabilities. Other names for an expansion device are port expander, port replicator, docking station, or network adapter.

**extension** — See *file extension*.

**external device** — See *device*.

## F

**file** — A collection of related information, saved on disk with a unique name. A file may be a program, information used by a program, or a document. See also *document*.

**file allocation table (FAT)** — The section of a disk that keeps track of the location of files stored on the disk.

**file name** — A set of characters that uniquely identifies a file within a particular folder. It consists of two parts: the actual name and the file name extension. See also *file extension*.

**file extension** — The three characters following the period (pronounced “dot”) at the end of a file name. The extension indicates the type of file. Examples are .exe for program files and .hlp for help files. See also *file name*.

**folder** — Also called directory. A container for organizing files saved to a disk. A folder is symbolized on screen by a graphical image (icon) of a file folder. A folder can contain files and other folders.

**format** — (verb) To prepare a blank disk for use with the computer's operating system. Formatting creates a structure on the disk so the operating system can write information to the disk or read information from it.

**frontside bus** — The primary pathway (bus) between the CPU and the computer's main memory. Also called "system bus." See also *bus*.

**function keys** — The keys labeled F1 through F12, typically located on the keyboard. Their function is determined by the operating system and/or individual programs.

## G

**gigabyte (GB)** — A unit of data equal to 1,073,741,824 bytes (1024 x 1024 x 1024 bytes). See also *byte*.

**ground** — A conductor to which all components of an electric circuit are connected. It has a potential of zero (0) volts, is connected to the earth, and is the point of reference for voltages in the circuit.

## H

**hard disk** — A storage device composed of a rigid platter or platters that can be magnetically coded with data. Hard disks hold much more information than diskettes and are used for long-term storage of programs and data. The primary (or only) hard disk in a computer is usually fixed, but some computers have secondary hard disks that are removable. By default, the hard disk is referred to as drive C.

**hardware** — The physical components of a computer system. Compare *software*.

**Hibernation** — A feature of many Toshiba notebook computers that saves to the hard disk the current state of your work, including all open files and programs, when you turn the computer off. When you turn on the computer again, your work is returned to the same state it was when the computer was turned off. See also *Standby*, *Suspend*.

**high-density diskette** — A 3.5-inch diskette that holds 1.44 MB of data. See also *diskette*.

**hot key** — (1) A feature in which certain keys in combination with the Fn key can set system options or control system parameters, such as the battery save mode. (2) A key or combination of keys that activates a memory resident program.

---

**hot swapping** — The ability to add or remove devices from a computer while the computer is running and have the operating system automatically recognize the change.

**icon** — A small image displayed on the screen that represents a function, file, or program.

**interlaced** — A method of refreshing a computer screen, in which only every other line of pixels is refreshed. Interlaced monitors take two passes to create a complete screen image. Compare *non-interlaced*.

**internal device** — See *device*.

**Internet** — The decentralized, world-wide network of computers that provides electronic mail, the World Wide Web, and other services. See also *World Wide Web*.

**keyboard shortcut** — A key or combination of keys that you use to perform a task instead of using a pointing device such as the AccuPoint.

**kilobyte (KB)** — A unit of data equal to 1024 bytes. See also *byte*.

**L1 (level one) cache** — Memory cache built into the processor to help improve processing speed. See also *cache*, *CPU cache*, *L2 cache*.

**L2 (level two) cache** — Memory cache installed on the motherboard to help improve processing speed. It is slower than L1 cache and faster than main memory. See also *cache*, *CPU cache*, *L1 cache*.

**LAN (local area network)** — A group of computers or other devices dispersed over a relatively limited area and connected by a communications link that enables any device to interact with any other on the network.

**liquid crystal display (LCD)** — A type of display that uses a liquid substance between two transparent electrode panels. When an electric current passes through the electrodes, the molecules in the liquid form a crystalline pattern that polarizes the light passing through it. A filter over the electrodes permits only non-polarized light to pass to the surface of the display, creating light and dark pixels.

**load** — To move information from a storage device (such as a hard disk) into memory for processing.

**local area network** — See *LAN*.

**logical drive** — A section of a disk that is recognized by the operating system as a separate disk drive. A system's logical drives may differ from its physical drives. For example, a single hard disk drive may be partitioned into two or more logical drives.

## M

**megabyte (MB)** — A unit of data equal to 1,048,576 bytes (1024 x 1024 bytes). See also *bytes*.

**memory** — Typically refers to the computer's main memory, where programs are run and data is temporarily stored and processed. Memory can be volatile and hold data temporarily, such as RAM, or it can be nonvolatile and hold data permanently, such as ROM. A computer's main memory is RAM. See *RAM*, *ROM*.

**microprocessor** — See *central processing unit (CPU)*.

**MIDI (Musical Instrument Digital Interface)** — A standard for connecting musical instruments, synthesizers, and computers. The MIDI standard provides a way of translating music into a form computers can use, and vice versa.

**modem** — Short for “modulator/demodulator.” A device that converts information from digital to analog and back to digital, enabling information to pass back and forth between digital computers and analog telephone lines.

**motherboard** — The main circuit board in the computer. It contains the processor, memory, and other primary components.

**MS-DOS<sup>®</sup> prompt** — See *system prompt*.

**multi-function drive** — A DVD drive that can read and write to CD and DVD media.

**multimedia** — A combination of two or more media, such as sound, animation, and video in a computer program or presentation.

**Musical Instrument Digital Interface** — See *MIDI*.

## N

**network** — A collection of computers and associated devices that are connected by communications facilities. A network allows you to share data and peripheral devices, such as printers, with other users and to exchange electronic mail.

---

**non-interlaced** — A method of refreshing a computer screen, in which each pixel of every line is refreshed as the electron beam scans across and down the screen. Compare *interlaced*.

**non-system disk** — A disk for storing programs and data that cannot be used to start the computer. Compare *system disk*.

## O

**online** — Available through the computer. Online may refer to information being read from your own computer's hard disk, such as online documentation or online help, or to information coming from another company on a company network or the Internet.

**operating system** — A set of programs that controls how the computer works. Examples of operating systems are Windows<sup>®</sup> XP and Windows<sup>®</sup> 2000.

## P

**palette** — See *color palette*.

**parallel** — Processes that occur simultaneously. In communications, it means the transmission of more than one bit of information at a time. On your computer, the parallel port provides a parallel communications interface between the computer and an appropriate device. Most modern printers are parallel. Compare *serial*.

**password** — A unique string of characters entered by a user to verify his or her identity to the computer or the network.

**PC Card** — A credit-card-sized expansion card designed to increase the capabilities of notebook computers. PC Cards provide functions such as modem, fax/modem, hard disk drive, network adapter, sound card, or SCSI adapter.

**peripheral** — Any device, such as a printer or joystick, that is attached to the computer and controlled by the computer's CPU.

**pixel** — Short for "picture element." The smallest dot that can be produced on a screen or printer.

**Plug and Play** — Generally, refers to the computer's ability to automatically configure itself to work with peripheral devices. When capitalized, refers to a standard that, when followed by a device manufacturer, allows a PC to configure itself automatically to work with the device.

**pointing device** — Any device, such as the AccuPoint or a mouse, that enables you to move the cursor on the screen.

**port** — A socket on the computer where you plug in a cable for connection to a network or a peripheral device.

**processor** — See *central processing unit (CPU)*.

**program** — A set of instructions that can be executed by a computer. The general classes of programs (also called software) are operating system, application, and utility. See also *operating system, application, utility*.

**properties** — The attributes of an object or device. For example, the properties of a file include the file's type, size, and creation date.

## R

**RAM (random access memory)** — Volatile memory that can be written to as well as read. By volatile, we mean that information in RAM is lost when you turn off your computer. This type of memory is used for your computer's main memory. See also *memory*. Compare *ROM*.

**random access memory** — See *RAM*.

**read-only memory** — See *ROM*.

**reboot** — See *boot, restart*.

**removable disk** — A disk that can be removed from a disk drive. A diskette is one example of a removable disk.

**resolution** — A measure of the sharpness of the images that can be produced by a printer or displayed on a screen. For a printer, resolution is expressed in dots per inch (dpi). For a screen, it is expressed as the number of pixels available horizontally and vertically.

**restart** — Synonymous with reboot. To reset the computer by reloading the operating system without turning the computer off. See also *boot*.

**RJ-11** — A modular connector used on most U.S. telephone systems and direct-connect modems. The RJ-11 connector is a 6-wire connector.

---

**ROM (read-only memory)** — Non-volatile memory that can be read but not written to. By non-volatile, we mean that information in ROM remains whether or not the computer is receiving power. This type of memory is used to store your computer's BIOS, which is essential instructions the computer reads when you start it up. See also *BIOS, memory*. Compare *RAM*.

**S**

**select** — To highlight or otherwise specify text, data, or graphics with the intent to perform some operation on it.

**serial** — Processes that occur one at a time. In communications, it means the transmission of one bit at a time sequentially over a single channel. On your computer, the serial port provides a serial interface between the computer and an appropriate device. Compare *parallel*.

**shortcut** — See *keyboard shortcut*.

**software** — See *program*. Compare *hardware*.

**Standby** — A feature of some Windows<sup>®</sup> operating systems that allows you to turn off the computer without exiting your open applications and to continue from where you left off when you turn the computer on again.

**Suspend** — A feature of some Windows<sup>®</sup> operating systems that allows you to turn off the computer without exiting your open applications and to continue from where you left off when you turn the computer on again.

**system disk** — A diskette that contains the operating system files needed to start the computer. Any diskette can be formatted as a system disk. A system disk is also called a “bootable disk” or a “startup disk.” Compare *non-system disk*.

**system prompt** — The symbol (in MS-DOS<sup>®</sup>, generally a drive letter followed by a “greater than” sign) indicating where users are to enter commands.

**T**

**TFT display** — See *active-matrix display*.

## U

**universal serial bus (USB)** — A serial bus that supports a data transfer rate of up to 12 Mbps (12 million bits per second). USB can connect up to 127 peripheral devices through a single all-purpose USB port. USB allows hot swapping of peripherals. See also *bus*, *hot swapping*, *serial*.

**upload** — To send a file to another computer through a modem or network. See also *download*.

**USB** — See *universal serial bus (USB)*.

**utility** — A computer program designed to perform a narrowly focused operation or solve a specific problem. Utilities are often related to computer system management.

## W

**Web** — See *World Wide Web*.

**Wi-Fi** — A registered trademark owned by the Wireless Capability Ethernet Alliance which stands for Wireless Fidelity, and is another term for the communication protocol to permit an Ethernet connection using wireless communication components.

**World Wide Web (www)** — The worldwide network of Web sites linked together over the Internet. A user of the Web can jump from site to site regardless of the location of the computer hosting the site. See also *Internet*.
